WRITING RECAP 2024

49 exam papers in Uzbekistan answered

So'zboshi:

Diyorbek's IELTS kanali 2019-yildan beri bo'lajak IELTS nomzodlarining imtihon oldi hayajoni va qo'rquvini yengillashtirish maqsadida, har bir imtihondan so'ng "discussion post"lar chop etib keladi. Bu postlar orqali imtihon topshirgan o'quvchilar umumiy platformada o'zlarining "performance"larini muhokama qilish imkoniyatiga ega bo'ladilar, bo'lajak nomzodlar esa savol turlarini kuzatib borishlari mumkin.

2023-yildan boshlab, O'zbekistonda birinchi marta, aynan 2023-yilda tushgan 50 ta esse va report uchun Diyorbek's IELTS jamoasi yuqori ball olgan namunaviy ishlarni tayyorladi. Ushbu jamlanma o'quvchilar tomonidan juda yaxshi qabul qilinib, kitobimizdan 160 000 dan ortiq nomzod foydalangan.

Jamoamiz bo'lajak IELTS nomzodlariga, qolaversa, o'qituvchilarga yanada ko'proq yordam berish maqsadida 2024-yilda O'zbekistonda tushgan 49 ta esse va report uchun ham yangi to'plamni taqdim etishga muvaffaq bo'lmoqda. Ushbu kitobning yaratilishida O'zbekiston IELTS hamjamiyatining hissasi katta, chunki har bir savol imtihon topshirgan nomzodlar tomonidan bildirilgan.

Kitobni taqdim etishdan asosiy maqsad — bo'lajak IELTS nomzodlariga yuqori balli insho va reportlar orqali tayyorgarlik ko'rishda ko'maklashish, imtihon oldi hayajon va qo'rquvni yengib, imtihonni muvaffaqiyatli topshirishlariga oz bo'lsa-da yordam berishdir.

Foreword:

Since 2019, Diyorbek's IELTS channel has been helping prospective IELTS candidates reduce pre-exam stress and anxiety by discussing the Writing questions after each test. Starting in 2023, and for the first time in Uzbekistan, the Diyorbek's IELTS team compiled high-scoring sample essays and reports based on 50 real questions that appeared in that year's IELTS exams. This collection was exceptionally well-received by students — over 160,000 candidates have benefited from the book.

Aiming to provide even more support for both future IELTS candidates and teachers, our team is now proud to present a new 2024 compilation, featuring model answers for 49 essay and report questions reported from actual exams in Uzbekistan. The creation of this book owes much to the contribution of the IELTS community in Uzbekistan, as each question was reported by test-takers themselves. The primary goal of publishing this book is to assist future IELTS candidates in their preparation by offering access to high-scoring samples, and to help them overcome pre-exam nerves and fear, ultimately supporting them in achieving success in the test.

DIYORBEEK'S IELTS LEARNING CENTER

Founded in 2022, Diyorbek's IELTS is one of Tashkent's leading IELTS preparation centers, committed to helping students achieve their desired band scores. With a clear focus on quality instruction and student success, the center has rapidly grown in both size and reputation.

Following the success of its first publication, *Writing Recap 2023*, Diyorbek's IELTS has expanded its operations and now serves students from two locations in Tashkent: the original branch in Chilonzor district and a second branch in Yunusobod district.

The center offers comprehensive English and IELTS courses that emphasize immersion and translation-based learning—two methods that have consistently proven effective in language acquisition. Its team includes four instructors who have scored Band 9 on the IELTS exam, along with a number of other highly qualified professionals dedicated to guiding students toward their academic and career goals.

In addition to full-time courses, Diyorbek's IELTS provides regular testing opportunities to help students track their progress. These include weekly Paper-based IELTS mock tests and daily CDI (Computer-delivered IELTS) mock exams, both of which have been praised for closely simulating real exam conditions. Furthermore, Diyorbek's IELTS is an official British Council-approved test venue, offering candidates the convenience of preparing for and taking the test in a familiar and supportive environment.

ABOUT WRITERS:

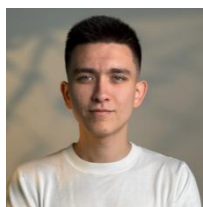

Diyorbek Hayitmurodov

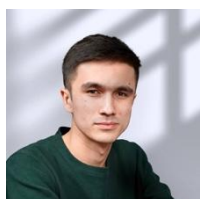

Founder of *Diyorbek's IELTS*, Diyorbek achieved Band 9.0 in his last two exams in 2023, with 8.5 in Writing each time. He contributed essays for October and select other dates.

Head teacher at *Diyorbek's IELTS*, **Jo'rabek Sanokulov** has a strong background in English Language and Literature. He holds an overall 9.0, with 8.5 in Writing across three separate sessions. His contributions cover June and various other dates. His telegram channel handle is @ieltswithsanokulov

Ulug'bek Umidjonov - Known for his *New Scientist*-style writing, Ulug'bek scored 8.5 in Writing and an overall 9.0. He provided model essays for April. His telegram channel handle is @ulugbekumidjonov

Alisher Abduvakhobov - The youngest Band 9 scorer in Uzbekistan and a holder of 8.5 in Writing, Alisher wrote for the first two months of the year — January and February. His telegram channel handle is @alisher_abduvohobov

Furqat Olimjonov

A committed teacher at *Diyorbek's IELTS*, Furqat (IELTS 8.5) contributed model responses for the final month — December. His telegram channel handle @ielts_cream

Sirojiddin Erkabayev

With a clear and analytical writing style, Sirojiddin (IELTS 8.5), who scored 7.5 in Writing, was responsible for July questions. His telegram channel handle is @siroj_notes

Navruzbek Khamidov

An experienced educator, Navruzbek contributed all model answers for the month of November. His telegram channel handle is @khamidovs_ielts

Muxriddin Xujaev - scored an overall 8.5 with an 8.0 in Writing. He contributed essays for the month of March. His telegram handle is @xojaevs

Temurbek Akbaraliev

A recent addition to the *Diyorbek's IELTS* team, Temurbek holds an MA in TESOL and years of teaching experience. He wrote for August. Follow him on Telegram @ieltsapex

Irina Lutsenko

A seasoned IELTS Writing instructor, Irina has achieved Band 9 twice and 8.5 in Writing on three occasions. She contributed model responses for May. You can find more of her essays on telegram @irinalutsenko

IELTS WRITING RECAP 2024

This book contains all the Writing questions from 49 paper-based IELTS exams held in Uzbekistan, as reported by students. The visuals are sourced from the internet.

To use this book effectively, we recommend reviewing the questions by category, as outlined in the contents. For example, there are over twenty questions featuring change charts—graphs that span across multiple years. If your exam is approaching, it's wise to focus on the most common types.

Please note that the sample answers included were not written under exam conditions. Our goal is not to suggest that you must write at this level to achieve a high band score.

Instead, we encourage you to actively engage with the sample responses. Read each one two or three times, then try to recreate it using only the notes you've taken. When taking notes, pay close attention to effective language, key features, and core ideas that you can apply in your own writing.

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph below shows the average house prices in three countries between the years 1997 and 2014.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph illustrates the changes in accommodation costs in three countries from 1997 to 2014. Overall, the house prices in the given countries adhered to rising trends, albeit to varying degrees. While Country A generally had higher housing costs, followed by Country B, Country C remained at the bottom, despite a gradual increase.

Country A and Country B shared similar standings in the initial years, having a price tag of almost \$200,000. It was not until these costs began to surge at the turn of the century, with the former country raising the prices to \$550,000 in 2004 and the latter reaching \$300,000. This gap had narrowed down by 2009, when Country B priced a single house at a whopping \$500,000 and Country A experienced a marginal decline to \$530,000 in its house values. From that year on, the discrepancy became more pronounced, with Country A seeing its accommodation prices skyrocket to \$750,000 and Country B remaining stable in its figures.

Country C, however, somewhat bucked the trend. Starting at about \$120,000, the housing cost in this country followed an uninterrupted upward trajectory before doubling in 2007, after which it bounced back to its starting point a year later. In 2009, this figure rebounded to \$250,000 and maintained a steady growth to \$270,000 in 2013, thereafter which it fell back to the previous peak - \$250,000.

WRITING TASK 2

You should spend around 40 minutes on this task.

Some people believe that the increasing use of computers and mobile phones for communications has had a negative effect on young people's reading and writing skills.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is a popular belief that the growing dependence on modern gadgets for correspondence is jeopardizing the literacy of youngsters. While I certainly acknowledge the perceived risks, I believe that using computers and mobile phones has encouraged the tendency to read and write more however subtle it may seem.

One primary concern stemming from the increasing use of technologies for communication is that most young individuals are spending much of their free time on online chatting instead of gaining knowledge from physical books. As is the case with the emerging generation of digital natives, technologies have rendered the use of conventional books rather obsolete for these people and shortened their attention span, making them show little drive for the traditional knowledge acquisition and resort to quick dopamine fixes instead. Since reading traditional books requires undivided focus and critical thinking to absorb information, the allure of online content on technologies, be it videos or games, is irresistible, and thus can be a source of distraction. The advent of typing is also a cause for concern. People of all ages used to exchange correspondence by handwriting in previous times, and ever since typing has become the norm, the old yet useful skill is in the process of vanishing. Handwriting has long been associated with mental sharpness and order, its fading significance is troubling, especially for the proponents of this medium.

Despite these arguments, however, I remain convinced that the rise of technologies is playing a key role in the growth of reading and writing. As people, youngsters in particular, are becoming increasingly connected in the online realm, the exchange of knowledge is faster than ever before, making individuals seek, gain, and circulate information and heighten their understanding of the world. This phenomenon makes reading go beyond merely flipping through pages and make its way to the virtual world. Additionally, writing, in the form of typing, is now enjoying new-found prevalence. Gone are the days when only educated people could write, and the appearance of gadgets equipped with keyboards and other special features enables anybody to express themselves in a written format. Auto-correct systems, language options, and instant access to the world of information are the benefits computers and smartphones confer to common people, which entices them to write more frequently to keep pace with others.

In conclusion, although I realize that there are decided downsides to over-reliance on technologies should a person remain literate in a traditional sense, I maintain that the recent development is a positive turn of events overall, considering its role in facilitating the circulation of knowledge and information once beyond ordinary people's reach.

13.01.2024

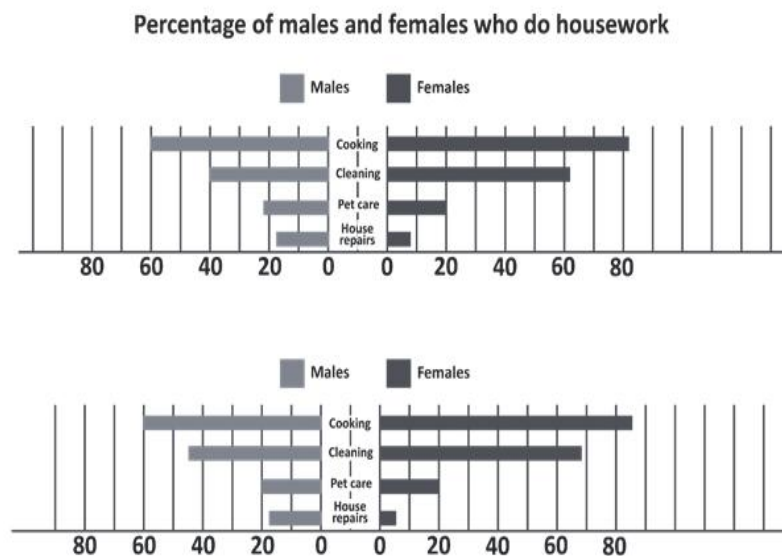

WRITING TASK 1

You should spend around 20 minutes on this task.

The first chart shows the percentage of women and men in a country involved in some kinds of home tasks (cooking, cleaning, pet caring and repairing the house). The second chart shows the amount of time each gender spent on each task per day.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar charts illustrate the proportions of males and females one country engaged in

household chores and how much time they spend on these activities on a daily basis. Overall, while the percentage of women actively involved in cooking food and cleaning the house is higher, that of men in animal husbandry and house maintenance is slightly greater than the opposite gender. Additionally, these proportions almost reflect the amount of time both genders allocate to the tasks.

Looking first at the share of men and women in household activities, the latter make up roughly 82% and the former account for 60%. The same disparity persists in tidying, with females leading with 62% and males lagging behind with 40%. Conversely, men emerge as dominant in pet care, at 22% compared to 20% represented by their female counterparts. The gap becomes noticeable in-house repairs, in which males constitute 18% and females only 8%.

Turning to the average quantity of time, identical patterns can be observed. While women channel 85 minutes into cooking a meal, men spend an hour on this activity. Likewise, cleaning requires females 68 minutes per day and males 45 minutes. Pet care, on the contrary, demands the same amount of time from both genders, 20 minutes each. House repairs are an outlier, where men devote 18 minutes and women spend just 5 minutes a day.

227 words.

Written by Alisher Abduvakhobov (IELTS 9.0, W8.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think that dangerous sport should be banned while others believe people should have the freedom to choose activities

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is a view that governments should prohibit extreme sports, like rock climbing and skydiving. I partially subscribe to this idea and will explain why.

Admittedly, the idea that extreme sports should be outlawed can be supported on many grounds. First and foremost, such sports normally pose danger to the survival of participants, as can be seen in the example of mountaineering. According to observations, hundreds of people die on an annual basis while climbing the mountain or hills, ultimately making this activity largely life-threatening. Also of a major concern is that skydiving can sometimes prove risky, especially when the equipment used starts malfunctioning. It is likely that those partaking in this sport may face severe injuries or even death if necessary, precautions are not properly taken into account before trying out such an extreme sport as high as thousands of meters. Therefore, it seems to me that an immediate ban on those sports is crucial if we are to save people's lives.

With that said, I do not fully advocate the given point of view since governments ought to consider a wide range of needs of individuals before implementing any serious measures. In other words, no one holds the right to restrain the interests and preferences of enthusiastic people that wish to take on new challenges by exerting themselves in skydiving as long as the safety and protection are ensured prior to participation. Equally important is the fact that unbeaten records are set in the activity of climbing mountains, such as the ones related to Mount Everest. Knowing there might be a chance of success, travelers from all over the world are generally keen to hit the highest peak out of pure curiosity and self-recognition. While there is still insurmountable hardship involved, it does not discourage climbers from their will of reaching the top of the mountain whatsoever.

In conclusion, despite the issues revolving around the survival of participants of dangerous sports, I firmly believe that such activities should not be banned outright given the elicited desire of individuals to go beyond their wildest expectations and push themselves to the extreme.

18.01.2024

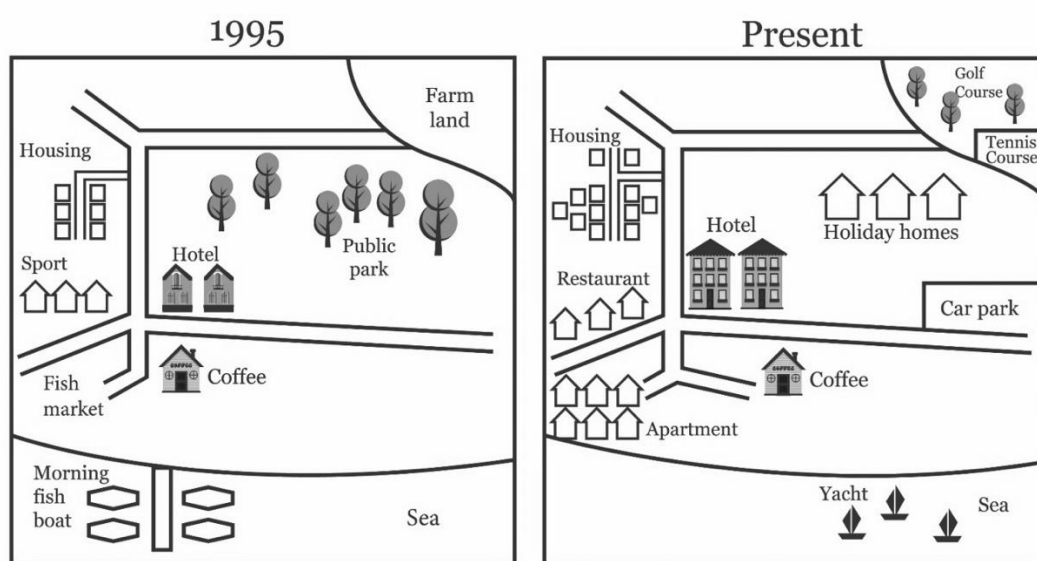

WRITING TASK 1

You should spend around 20 minutes on this task.

The diagram below shows the changes of the town named Shakefield from 1995 until now.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The map illustrates the evolution of Shakefield town since 1995. Overall, the elimination of agricultural land, green space, sports venues, and a seafood market has created space for the introduction of a golf course, tennis course, vacation rentals, car park, eateries, cottages, and yachts during the period. Additionally, the remaining areas - residential blocks, hotel, and coffee shop - have stayed largely untouched, with only minor changes.

In 1995, the area used to boast a leafy environment, with farmland on the top-right boundary. To the bottom of the agricultural land was a city park neighboring a hotel, and a cafe could be spotted on the opposite side. The housing complexes and sports venues were situated on the other end of the road, with a fish market and morning fish boats located near the sea, making them largely accessible by water.

Since then, Shakefield has undergone significant makeovers. The removal of agricultural land made room for golf and tennis courses, and holiday homes have been built at the expense of removing the public park near the hotel, which has so far been enlarged. While the residential areas have been extended with newly-built complexes, the sports venues have been repurposed into restaurants. The cottages have emerged, resulting in the disappearance of the fish market; however, the coffee shop remained intact. Other alterations includes the removal of the morning fish boat and the introduction of yachts.

WRITING TASK 2

You should spend about 40 minutes on this task.

The global demand for oil and gas is increasing. Some believe that we should therefore encourage the exploitation of remote areas.

Do the advantages of this outweigh the disadvantages?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is an ever-increasing need for fossil fuels, such as oil and gas, from all over the world. Therefore, some minds have applied themselves to the idea that the source in far-off regions should be utilized to meet this growing demand. While the potential benefits of this proposal include the reduced environmental footprint for ordinary people and abundant supply of energy, I believe that the drawbacks - increased costs of fossil fuels and possible military operations - carry more weight.

The primary advantage this suggestion can confer is the less ecological harm common individuals suffer from. When oil and gas are extracted in distant locations, the air and water pollution that follow may not directly impact the well-being of those people since such excavations take place far away from crowded areas. It is therefore possible that factories burning fossil fuels and discharging chemical waste into the environment can be established in uninhabited zones, ensuring positive health outcomes for those living in rural and urban areas. Additionally, a greater provision of oil and gas can be found in places previously unknown to man. As the current capacity of these fuels is being depleted at an unprecedented rate, so is the demand for surpluses. To slow down the complete depletion of natural resources, governments should seek alternative sites to fill the gap, and remote areas look promising.

Despite these seemingly well-founded upsides, I remain convinced that the perceived drawbacks are more considerable. The chief concern is that the prices of fossil fuel can skyrocket once it is discovered in far-away locations. It is because the expense of setting up the infrastructure, employing miners, and transporting the energy source can strain the budget of governments, and to buffer the effects, they will have to resort to increasing the costs. This hefty price goes beyond the financial capability of average consumers to afford, failing to justify the upfront expenditures. Perhaps more worryingly is the fact that military actions can occur in places filled with precious energy sources. For instance, the USA troops invaded some of the Gulf Arabs after a huge amount of oil was unearthed. Such instances pose ethical questions regarding the utility of excavating remote areas in search of more fossil fuel supplies. Although not many people inhabit these places, the spread of military personnel can possibly lead to conflicts of large scales.

In conclusion, even though I recognize the merits of the given proposal, the lesser environmental contamination and massive sources of fossil fuel, I still uphold that the demerits in terms of exorbitant oil and gas prices and security risks are too great to dismiss.

27.01.2024

WRITING TASK 1

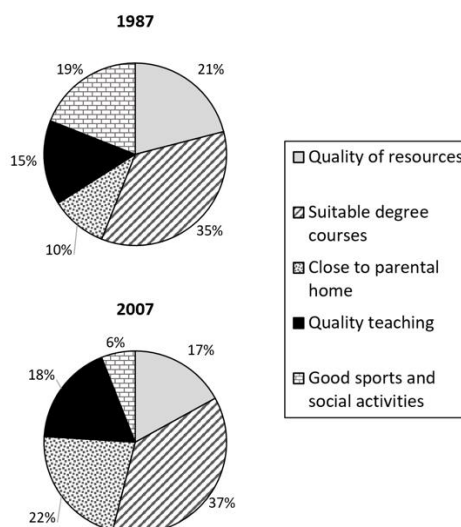

You should spend around 20 minutes on this task.

The charts below show the reasons of students to study a particular in a UK university in the year 1987 and 2007.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Reasons why students chose a college or university, UK

The pie charts illustrate the distribution of students driven by different factors to study at one UK university in 1987 and 2007.

Overall, relevant degree courses remained the major driver to pursue higher education in that university over the period, with other determinants trailing distantly behind in terms of proportions. Additionally, students prioritized the closer distance and top education quality more in the new century than they did in the previous one, while placing lesser emphasis on the availability of fitness and social amenities.

Looking first at the percentages in 1987, the majority of students opted for the university due to the suitability of degree courses, making up 35%. Following some way behind were the proportions of learners prioritizing the quality of materials (21%) and noteworthy physical and social pursuits (19%). Finally, exceptional instructions and convenient locations attracted only 15% and 10% students, respectively.

By 2007, the figures in the mix had shifted considerably. The relevance of degree classes stayed as the leading reason to choose that university, increasing to 37%. Similarly, the share of students concerned about the proximity more than doubled (22%) and that of those focused on the quality teaching increased by 3- percentage-points. There was a fall of 4% in the percentage of learners choosing the university thanks to quality resources, and good sports and social activities fell out of favor, declining more than threefold (6%).

230 words

Written by Alisher Abduvakhobov (IELTS 9.0, W8.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

It is better for people to be unemployed than people to be employed but they do not enjoy.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is a view that having a job without satisfaction pales in comparison to being unemployed. While joblessness can confer certain advantages - more free time on personal development and less stressful lifestyles - I believe that securing a job position is more crucial, particularly in today's era characterized by increasing living expenses that require financial stability.

Admittedly, pursuing no career can be somewhat beneficial. People without the obligation to work "9-to-5" can allocate more time to their individual growth by acquiring new skills and knowledge. They can educate themselves on critical branches of knowledge such as freelancing, foreign languages, and online trading free of charge through YouTube tutorials from the comfort of their homes. Those who have a job, on the other hand, might fail to spend as much time and energy on the development of such skill sets after coming from an exhausting day in the office. Additionally, individuals without employment may lead lives with less stress and anxiety, which would otherwise stem from job responsibilities. These people are not expected to meet deadlines, work beyond operating hours, and deal with co-workers and customers, all of which would place a mental burden and drain their energy.

Despite these arguments, I remain convinced that landing a job is a more critical way of approaching life these days. First and foremost, the living costs such as mortgage, childcare expenses, utility bills, and other similar expenses are growing at an unprecedented pace and compelling individuals to earn a better livelihood. These economic challenges make unemployment arguably the riskiest path to choose, which can jeopardize their living conditions almost without solid financial foundations to rely on. Moreover, life satisfaction is often tied to how financially healthy a person is, say, in the form of material possessions, and being jobless usually prevents people from reaching the pinnacle of enjoyment that accompanies the ability to afford a new house, car, exotic vacations, and other luxuries. Without a secure job with good income booked, deriving pleasure solely from spare time is not merely impossible; it is pointless given the dire financial challenges facing the unemployed these days.

In conclusion, although one might be justified in claiming that life without a job is virtuous, I have reservations about this statement. Securing a position in the ever-changing landscape of employment is not only a pre-requisite for financial sustainability, but it also gives individuals a sense of purpose, through which fulfillment is attainable.

03.02.2024

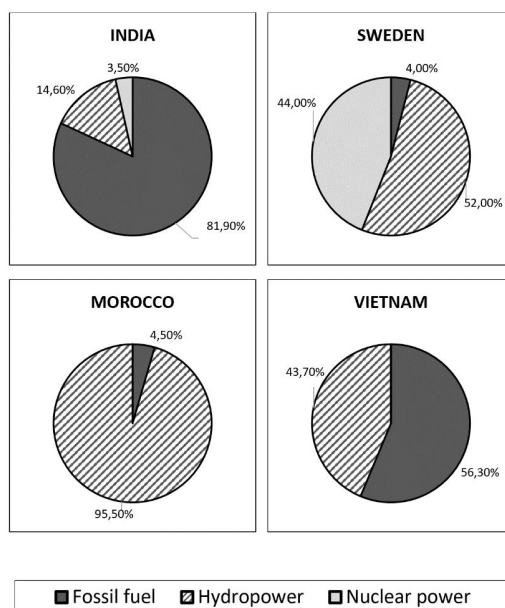

WRITING TASK 1

You should spend around 20 minutes on this task.

The pie charts below show the sources of the electricity produced in four countries in four countries between 2003 and 2008.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The pie charts compare the production scale of three different electricity sources in four countries from 2003 to 2008. Overall, while two Asian countries - India and Vietnam - primarily relied on fossil fuels as a source of electricity, Sweden and Morocco heavily used hydropower, with the latter abandoning nuclear resources like Vietnam did.

Looking first at the highest output of electricity from fossil fuels, India led the mix with a chart high of 81.9%, distantly trailed behind by Vietnam, at 56.3%. Both of these countries also harnessed energy from hydropower in huge amounts, albeit in reversed orders of dominance, with Vietnam producing a staggering 43.7% hydro energy. This figure was in substantial contrast to 14.6% by the other country. While 3.5% of electricity came from nuclear energy in India, no amount of power was derived from this source of energy in Vietnam.

The remaining countries, Morocco and Sweden, bucked the trend, with hydropower emerging as the most significant source of electricity in both nations. Almost all the electricity available in the African country was generated from water bodies (95.5%), whereas the figure for Sweden stood at just over half (52%). The amount of fossil fuels in these countries exhibited somewhat similar standings, 4.5% in Morocco and 4% in Sweden. The European nation, however, made use of nuclear power to produce electricity (44%), compared to 0% represented by Morocco.

229 words

Written by Alisher Abduvakhobov (IELTS 9.0, W8.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people say that the governments should pay for health care and education, but others think that this is not the government's responsibility.

Discuss both views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Opinions tend to vary regarding whether authorities should finance medical care and education sectors, with one school of thought suggesting it to be the case. Others, however, beg to differ. In my opinion, the onus lies on governments to prioritize financial allocations in these fields, as ordinary people should benefit from the taxpayer money they are paying.

Admittedly, one can be justified in claiming that individuals should be obliged to cover their tuition and healthcare fees. Their preferences for education often vary, so do the expenditures to channel into their respective majors. If, critics argue, governments were to meet everyone's demand, the national budget would suffer significantly, since the number of beneficiaries could be too great to individually attend to. The idea that governmental bodies have to foot the healthcare bills of their citizens may also entail unforeseen consequences, with the most concerning one being a fall in individual responsibility for one's well-being. Knowing that politicians would be accountable to bear medical-care costs, some people would not take their health condition seriously, potentially prompting a rise in the number of disease-ridden citizens and producing unintended effects. This, as opponents assert, would not happen as frequently if people paid for their healthcare expenses.

Despite these arguments, I remain convinced that governments are still in charge of funding the necessary outlay in education and medicine. As for the former, national development heavily relies on the literacy rates of common people, and should they simulate the domestic growth, these individuals need to receive proper education. Considering they are contributing to the national budget accumulation through taxpayer, it is only fair when they benefit in return, especially when their tuition fees outweigh their current earning power. The same principle extends to healthcare as well. However knowledgeable the general public is, the national sustainability is impossible to achieve without fit citizens. One should also acknowledge the fact that some ailments, particularly chronic ones, are too expensive for an average person to recover from. In such situations, the financial assistance from governments is both a necessity and only source of hope; otherwise, the imminent death can befall these desperate patients.

In conclusion, while I realize that financial requirements of each person for education and medicine may sometimes be unmanageable for authorities to cover, I still feel that it is their duty to aid the population if a national decline is to be avoided.

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph below shows the number of overseas visitors to three different areas in a European country between 1987 and 2007.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph compares the number of tourists to three natural areas in a particular European country from 1987 to 2007. Overall, a universal rising trend can be seen in the figures of all tourists, regardless of their destinations. Despite being less appealing, lakes attracted more visitors over time before losing their increasing popularity at the end. Coastal areas remained the most visited areas for the majority of the period, while the opposite can be said of mountains.

Lakes exhibited the biggest change in the number of their visitors. Starting at a chart low of 10,000, the figure for these areas saw uninterrupted growth until the year 2002, peaking at 75,000. From this year on, this number declined back to 50,000, the same figure recorded in 1999, making lakes the second busiest area after beaches.

As for onshore areas, they were the leading spots on the chart, with an initial standing of 40,000 visitors. There was a marginal drop to 35,000 in 1992, after which the figure followed an upward trajectory for the rest of the period, finishing at 75,000 in 2007 and retaining the utmost popularity.

Mountains, on the other hand, did not receive as many tourists. Being a runner-up at 20,000 and growing to 30,000 in 1992, the number of visitors to mountainous areas fell to its starting point after three years, allowing lake-goers to overtake. After repeating a similar pattern of change in the following years, the figure for mountain visitors culminated at 35,000 in the final year.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some countries achieve international sporting success by building specialised facilities that are used only to train top athletes, instead of providing sports facilities that everyone can use.

Do you think this is a positive or negative development?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In many countries, the distribution of exclusive fitness complexes is uneven between top-tier sportspeople and ordinary individuals. While providing special facilities for the use of successful athletes only is justifiable in certain instances, I believe that doing so at the expense of downplaying the needs of general public is nothing short of an irrational taxpayer use, making the development largely undesirable.

Admittedly, there is some merit to empowering top sportspeople with access to state-of-the-art fitness facilities. These individuals represent their country in global arenas and strive to claim championship titles, for which they should prepare to the best of their potential. To maximize their chances of success, governments are wise to provide these athletes with necessary equipment and training grounds that cater to their specific preferences, possibly contributing to their outstanding performance in international tournaments. Additionally, successful athletes often bring revenues for their countries in return, which can justify the upfront investments they have benefited from. Average people, on the other hand, use special sports facilities and attend to their daily errands after all, booking their nations no additional income, unlike their athlete counterparts that offer mutual advantages.

Despite these seemingly rational arguments, I remain convinced that depriving the public of access to modern fitness amenities can do more harm than good. Firstly, common people may feel marginalized and discriminated if they are not allowed to use the same facilities as elite athletes do because it is these average individuals that fill the national budget deficits through taxpayer money. These financial allocations are then directed at constructing fitness complexes specifically for the benefit of sportspeople, leaving the actual beneficiaries unattended and perpetuating civil injustices in a country. A further downside is that limited access to contemporary sports facilities may prompt a rise in the number of people affected by some sort of disease. Regularly engaging in physical activities in full-fledged fitness amenities would deter individuals from leading a sedentary lifestyle, and their absence can create a host of medical issues, ranging from obesity to other preventable ailments through exercise. This, in effect, strains the budget of governments due to increased healthcare expenses.

In conclusion, although I acknowledge the financial advantages of making modern sports facilities available solely to top athletes, I feel that these benefits are easily eclipsed by the pressure to cover medical care expenditures in order to treat disease-ridden people. It is therefore only just when average individuals are equally entitled to capitalize on the same privileges as sportspeople are.

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph below shows the number of people taking part in four different kinds of sports in a particular region between 1985 and 2005.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph illustrates the count of participants in four different types of sports in one region from 1985 to 2005. Overall, despite the initial dominance, the number of people partaking in rugby fell significantly, eventually bottoming the chart and converging with the count of badminton enthusiasts. Additionally, while the figures for tennis players rose sharply and took the lead, those for basketballers ranked third and remain almost unchanged over the period.

Focusing first on the higher figures, there were just under 250 rugby players in 1985, a number that then followed a downward trajectory for the rest of the period and eventually ended it at only 50. The count of tennis participants, on the other hand, exhibited an opposite pattern. Starting at 150, the figures only rose to finally peak at 225 in 2005 and lead the pack.

Basketball and badminton bucked the foregoing trend. As for the former, 75 individuals took part in basketball in 1985, after which no notable changes occurred in their figures, and nearly the same number of players still did this sport even after 30 years. Something similar was mirrored by the count of badminton participants. With an original point of about 50 players, this form of sport did not attract or lose any more enthusiasts for the remainder of the period, remaining the least favorite fitness activity in the country.

WRITING TASK 2

You should spend about 40 minutes on this task.

Whether or not someone achieves their aims is mostly by a question of luck.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is a view that success hinges on serendipity. While there have been instances where luck dictated the path to success, entirely depending on this element in this regard equals significantly dismissing the chemistry of hard work and determination.

Taking a sneak peek at the discovery of America as a continent reveals so much about the importance of luck in achieving remarkable outcomes. Columbus, the man who accidentally found this previously-unknown land, had initially intended to sail towards India, most likely in the hope of establishing trade routes over the sea. Little did he realize that Columbus was actually headed to a new continent, which would further alter the entire course of human civilization as we know it today. Such unexpected explorations as this one underscore the relevance of luck with respect to life success.

Despite these occasional events, however, the lion's share of success lies in how industrious a person is. Cristiano Ronaldo - a celebrated football player - serves as a pre-eminent example. The Portuguese has shared the stage with another, albeit no less hardworking, athlete, Lionel Messi. While the latter football player has also remained relentless to realize his goals, the former one is an epitome of resilience and iron mindset. As he highlighted in one of his recent interviews with the press, "Talent without hard work is nothing", words within which emerges a real ingredient of success. This reinforces the idea that becoming successful in any chosen branch is the by-product of effort and time, without which groundbreaking breakthroughs are hardly ever feasible.

In conclusion, although serendipity plays its part in bringing certain achievements to light, completely attributing success to it would be a mistake on its own. At the end of the day, luck favors the prepared mind.

The line graph shows the price of banana in Japan, France, Germany, and the USA from 1994 to 2004.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph illustrates the banana prices in Japan, France, Germany, and the USA between 1994 and 2004, measured in US dollars per kilogram. Overall, Japan had the highest banana prices throughout the period, while the USA consistently recorded the lowest. All four countries experienced some fluctuations, but Japan showed the most noticeable upward trend by the end.

In 1994, Japan started at around \$2 per kilogram, which was significantly higher than the other three countries. Its price then peaked at nearly \$3 in 1995, before dropping sharply the following year. Although it fluctuated in the following years, the price gradually climbed again and reached about \$2.80 by 2004, the highest point among all countries.

France and Germany had similar trends in the first few years, both staying within the \$1.4–\$1.8 range. While Germany remained fairly stable over the entire period, France saw a more noticeable drop in 2003, hitting its lowest price at around \$1.1, before recovering slightly in 2004.

In contrast, the USA had the most stable and lowest prices. Starting just above \$1 in 1994, it remained steady with very little change over the ten years.

WRITING TASK 2

You should spend about 40 minutes on this task.

Most employers nowadays put increasing emphasis on social skills. Some people believe that social skills are important in addition to good qualification for job success.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In recent years, social skills have become a key factor in the hiring process, with many employers valuing them as much as academic qualifications. I strongly agree that social abilities play a vital role in achieving job success, alongside formal education.

To begin with, strong communication and interpersonal skills are essential for effective collaboration in most workplaces. Modern jobs often require individuals to work in teams, lead discussions, and handle conflicts in a professional manner. Without the ability to express ideas clearly or listen actively, even highly qualified professionals may struggle to contribute meaningfully. For example, in project-based industries like IT or design, success depends not only on expertise but also on how well team members interact and coordinate.

Moreover, employers increasingly seek adaptable individuals who can manage relationships and respond to workplace dynamics. Social skills such as emotional intelligence, negotiation, and empathy enable employees to work with diverse colleagues and handle client relations effectively. These qualities often influence job performance, leadership potential, and career growth. A technically skilled employee may deliver tasks efficiently, but one who combines competence with strong people skills often becomes a more valuable asset to the company.

Nevertheless, academic qualifications still serve as a foundation, especially for technical or specialized roles. However, once minimum educational criteria are met, employers tend to prioritize individuals who demonstrate professionalism, confidence, and the ability to work well with others.

In conclusion, while educational background remains important, I firmly believe that social skills are equally, if not more, important in today's professional world. A combination of knowledge and interpersonal ability is the true formula for job success.

You should spend around 20 minutes on this task.

The table below shows the number of Australian students studying abroad from 2004 to 2006.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart illustrates the number of Australian students studying in five different countries—USA, New Zealand, UK, Germany, and Japan—between 2004 and 2006.

Overall, the USA and New Zealand consistently attracted the largest number of Australian students, while Germany and Japan had the fewest. A steady increase in student numbers was observed across all countries over the three-year period.

In detail, the USA remained the top destination throughout the period, with student numbers rising from just over 2600 in 2004 to around 2900 in 2006. New Zealand followed closely, increasing from approximately 2550 in 2004 to just above 2700 by 2006.

The UK attracted significantly fewer students compared to the top two destinations, starting at about 1500 in 2004 and increasing slightly to around 1600 by 2006. Germany and Japan recorded the lowest numbers of Australian students. In both countries, the figures were relatively stable and remained under 400, with minor increases year by year.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people say that the main of advertising is to improve the sales of products that people do not really need.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In today's consumer-driven world, advertising plays a powerful role in shaping people's buying decisions. While it can be argued that advertising helps consumers become aware of products and make informed choices, I strongly agree that the primary goal of much modern advertising is to increase sales of items that are not essential.

To begin with, many advertisements focus on creating a perceived need rather than promoting genuinely useful products. Through persuasive messaging, emotional appeal, and celebrity endorsements, companies often market luxury items, fashion trends, and upgraded electronics as must-haves, even though people can function perfectly well without them. A clear example is the annual release of new smartphones with only minor improvements over previous models. Advertisements portray these products as life-changing, pushing consumers to upgrade unnecessarily.

Moreover, advertising has evolved to target people's insecurities and desires rather than their needs. Social media platforms, for instance, are flooded with ads that encourage people to buy diet pills, anti-aging creams, or expensive clothing to appear more attractive or successful. These products often exploit emotional triggers and societal pressure, causing individuals to spend money on things that offer little long-term value.

That said, not all advertising is misleading. Some campaigns promote public services, health products, or environmentally friendly goods. However, these are exceptions rather than the norm in an industry largely driven by profit.

In conclusion, although advertising can sometimes serve a helpful purpose, I believe that its main function today is to increase demand for non-essential products. By appealing to emotions and insecurities, many advertisements convince people to buy things they do not truly need.

You should spend around 20 minutes on this task.

The table shows the change in the number of cinemas in different regions in a European country between 2004 and 2009.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

	2004	2009	Percentage Change
City Center	1,512	1,620	+7.14%
Near City Center	300	400	+33.33%
Suburb	40	30	-25%
Countryside	108	90	-16.67%
Total	2,100	2,287	+8.9%

The table illustrates the changes in the number of cinemas in various regions of a European country between 2004 and 2009. Overall, the total number of cinemas increased slightly over the five-year period, with growth observed in all areas except for the suburb and countryside, which saw declines. The city center had the highest number of cinemas in both years.

In 2004, the city center boasted 1,512 cinemas, the highest figure among all regions, which rose to 1,620 by 2009—a 7.4% increase. The area near the city center also experienced growth, with the number of cinemas increasing from 300 to 400, showing the highest growth of 33.33%.

By contrast, the suburb experienced a significant drop in cinema numbers, falling from 40 to 30, representing a 25% decrease. Similarly, the countryside saw a drop from 108 to 90 cinemas, a 16.67% decline.

Despite the mixed trends, the overall number of cinemas across the country rose from 2,100 to 2,287 between 2004 and 2009, marking a modest overall growth of 8.9%.

WRITING TASK 2

You should spend about 40 minutes on this task.

Consumers are faced with an increasing number of advertising by competing companies

To what extent do you think consumers are affected?

What measurements can be taken to tackle the problem?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In today's highly competitive market, consumers are constantly exposed to a growing number of advertisements from rival companies. This situation has led to several negative effects on buyers, and I believe urgent steps are required to mitigate the issue.

Consumers are increasingly affected by the overwhelming presence of advertising in their daily lives. One of the primary ways this manifests is through confusion and decision fatigue. When people are bombarded with a wide array of advertisements for similar products—especially on television, social media, and websites—they may struggle to differentiate between genuine quality and clever marketing. This often results in purchasing decisions based not on need or value, but on emotional appeal or misleading claims. Moreover, excessive advertising promotes a culture of materialism. It encourages impulsive buying and fuels the desire for unnecessary goods, especially among younger audiences, leading to financial strain and unsustainable consumption habits.

To combat the negative effects of excessive advertising, coordinated action is needed from both authorities and individuals. First, regulatory bodies should enforce stricter laws around advertising practices. Misleading or manipulative ads must be penalized, and companies should be required to provide transparent information about their products. Second, educational campaigns can help raise awareness among consumers, teaching them how to critically evaluate advertisements and make informed decisions. Additionally, individuals can install ad blockers and limit their exposure to commercial content, especially online.

In conclusion, the growing volume of advertising is having a considerable impact on consumers' ability to make rational decisions and manage spending. However, with proper regulation and increased public awareness, the negative effects of excessive advertising can be significantly reduced.

23.03.2024**WRITING TASK 1**

You should spend around 20 minutes on this task.

The table below the results of a survey of first-year students taking various courses at a particular university. It shows how many of the students considered various aspects of their course 'very good'.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Student satisfaction – percentage of respondents rating aspect as 'very good'

Course	Pre-course information	Teaching quality	Tutor Support	Resources (Print)	Resources (other)
Economics	55%	95%	92%	59%	62%
Law	72%	67%	79%	70%	80%
Commerce	95%	95%	93%	81%	86%

The table presents the results of a survey conducted among first-year university students, measuring the percentage of respondents who rated various aspects of their courses as 'very good' across three fields of study: Economics, Law, and Commerce.

Overall, students studying Commerce expressed the highest levels of satisfaction across all categories, while ratings for Economics and Law were more varied. Teaching quality and tutor support received generally strong approval across all disciplines, whereas printed resources showed the widest disparity.

Focusing first on teaching and support, both Commerce and Economics students rated teaching quality very highly, at 95%, followed closely by tutor support (93% and 92%, respectively). In contrast, Law students rated teaching quality considerably lower at 67%, though 79% still gave a high rating for tutor support.

When it comes to pre-course information and resources, Commerce again led with the highest satisfaction in all three categories: 95% for pre-course information, 81% for print resources, and 86% for other resources. Law students gave moderate ratings for these aspects, with 72% satisfied with pre-course information, and relatively strong ratings for other resources (80%). Economics, however, had the lowest satisfaction in pre-course information (55%) and print resources (59%).

194 words

Written by Muxriddin Xujaev (IELTS 8.5, W8.0)

WRITING TASK 2

You should spend about 40 minutes on this task.

Many people believe that it is easier to have a healthy lifestyle in the countryside. Others believe that there are health benefits of living in cities.

Discuss both views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In today's world, maintaining a healthy lifestyle is a growing concern, and people are divided over whether this is more easily achieved in the countryside or in urban areas. While some argue that rural environments promote better physical and mental health, others believe that cities provide greater access to healthcare and wellness facilities. This essay will explore both views before presenting my own opinion.

Those who favour the countryside often point to the cleaner air, lower noise levels, and access to nature. Unlike cities, rural areas are typically free from heavy traffic and industrial pollution, allowing residents to breathe cleaner air and enjoy quieter surroundings. This can have a positive effect on both mental and physical health. Moreover, the pace of life in the countryside tends to be slower, which may reduce stress. The availability of fresh, locally grown produce also supports healthy eating habits, and outdoor activities like hiking or farming encourage physical exercise.

On the other hand, many believe that cities offer better opportunities to stay healthy. Urban environments provide quick access to advanced medical care, fitness centres, and a wide variety of healthy food options. Additionally, cities often host public health initiatives, wellness programs, and recreational facilities that promote active lifestyles. With better public transport and walkable infrastructure, city dwellers may incorporate more movement into their daily routines than those in car-dependent rural areas.

In my view, while both settings offer unique benefits, the countryside is generally more conducive to a healthier lifestyle due to its natural environment and reduced stress levels. However, the advantages of city life in terms of medical access and modern conveniences cannot be overlooked.

In conclusion, both the countryside and cities have their merits when it comes to healthy living. Yet, I believe that the overall environment and lifestyle in rural areas make them more favourable for maintaining long-term health and well-being.

The graph below shows the amount of tea and coffee imported by four different countries in tonnes in 2007.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart shows import levels of coffee and tea in four different countries in the year 2007. Overall, it is clear that tea was imported at significantly higher quantities than coffee. However, the pattern differs/varies from country to country.

Of all countries, the UK was the biggest tea importer, shipping as much as 160,000 tonnes of this product. This was in stark contrast to its coffee import, which was eight times as little, at a mere 20,000 tonnes. Following some way behind came the USA, where a similarly higher amount of tea (120,000) was imported compared to coffee (40,000).

In contrast, Canada and Germany led in coffee importation, albeit at lower levels. Canada, in particular, bought in a staggering 80,000 tonnes of this product, four times the amount of tea imported. This made this country the biggest importer of coffee. In Germany, interestingly, coffee and tea import levels were similar, at about 50,000 and 40,000 tonnes, respectively.

158 words

Written by Ulugbek Umidjonov (IELTS 9.0, W8.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Many young people do not spend their holidays and weekends doing outdoor activities like hiking and climbing in natural environments.

Why is this the case?

How can they be encouraged to go out in natural environments?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In a world driven by work, the role of relaxation has never been more pronounced. In particular, the way many young people spend their leisure time is often called into question. On holidays, most of them choose to stay home rather than engage in outdoor activities, which, in turn, begs the question of why this is the case and of what measures can be taken to discourage such a behavior.

The contributing factor in young people's tendency to stay in on holidays is none other than technology. As trite as this explanation may be, comfort creatures such as smartphones and tablets effectively serve as better alternatives to traditional means of recreation – whether it is hiking or climbing. When given the choice between physically demanding activities and more immediate, accessible sources of entertainment, people are bound to choose the latter over the former. After all, leisure activities act as nothing but relaxation, and our brain favors easy-to-achieve things rather than difficult ones.

However, all of this is not to say that it is impossible to discourage young people from their unhealthy habits. Their family members or friends, who are more in tune with nature, can help inspire them to spend more time outdoors. This could come in the form of regular visits to the mountains and other natural sights, which is common practice in my country, Uzbekistan. In this way, even those completely detached from nature will realize their innate connection with it, having tasted the sweetness of wonders of nature firsthand. As a result, a treadmill effect may ensue – one that involves more homestay people developing a taste for the outside world.

In conclusion, leisure time is rarely spending time with nature, but is, in fact, synonymous with staying at home scrolling through social media. The technologically driven world we live in today ensures that recreation is within reach, rendering outdoor activities obsolete. As problematic as this tendency might be, there are ways to fight it – through increased exposure to the natural world with the help of friends and family.

WRITING TASK 1

You should spend around 20 minutes on this task.

The charts below give information about the UK's steel industry from 1970 to 2000.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The two line graphs illustrate changes in the supply and demand of steel in the UK, along with the number of workers employed in the industry from 1970 to 2000. Overall, demand for steel declined over the period, as did domestic production and employment figures, while steel imports increased significantly.

In 1970, as much as 200 million tonnes of steel were on demand in the UK. However, this figure declined steadily over the next two decades, hitting a low of around 100 million tonnes by 1990, where it then stabilized for the remainder of the period. Steel production mirrored this downward trend, falling from over 150 million tonnes in 1970 to about 60 million tonnes by 2000.

In contrast, steel imports exhibited a consistent upward trend. In 1970, the UK imported only around 20 million tonnes of steel. However, by 2000, this figure had risen steadily, eventually matching domestic production levels at approximately 60 million tonnes.

The number of workers in the steel industry also declined markedly. Starting at around 50,000 in 1970, employment fell in each subsequent decade, reaching about 18,000 by 2000—roughly a third of the initial figure.

WRITING TASK 2

You should spend about 40 minutes on this task.

***Many criminals commit further crimes as soon as they are released from prison.
What do you think are the causes of this?
What possible solutions can you suggest?***

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Crime is a near-universal phenomenon, with almost all countries seeking ways to contain it. One such effort is to address recidivism, the act of committing further crime even after time in prison. This has often come in the form of questioning its culprits - whether societal or systemic - and implementing measures necessary for tackling it.

The contributing factor in reoffending is, perhaps, the challenges of post-prison life. Much too often, former inmates are rejected from the society that they used to live in as innocent members. Now that they walked on the wrong side of the law for once, however, they will need to live with the stigma of being a criminal. This may, in effect, drive them away from their now "freed" life and into prison again, where they were not being judged. Even worse is when their family members come into this picture - doing something as serious as disowning their own sons or daughters for a mistake that they have already paid for. This may then lead these isolated people to return to their old criminal lives.

As rife as this problem is, governments can take steps to reduce recidivism by raising awareness among the public. One such strategy could be to shed more light on the struggles of ex-convicts on the news and changing the narrative around them. The message that not all criminals are evil and that they deserve a second chance could change the minds of many people. In the same way that streets filled with fast food or IKEA adverts normalize impulsive purchases, so could the wall-to-wall coverage of misjudged former inmates challenge the status quo. This can even go beyond state-funded media, with the private sector sharing the responsibility and posting these stories on their social media accounts.

In conclusion, while the cycle of reoffending remains a troubling aspect of modern justice systems, it is not irreversible. By acknowledging the social barriers that former inmates face and addressing public attitudes through widespread awareness campaigns, governments and media alike can play a crucial role in breaking the stigma. Giving ex-convicts a fair chance at reintegration not only benefits them, but also contributes to a safer, more empathetic society overall.

You should spend around 20 minutes on this task.

The graph below shows the number of overseas visitors who went to the UK for different purposes between 1989 and 2009.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph shows changes in the number of international visitors who visited the UK for three different reasons between 1989 and 2009. Overall, the UK saw rises in its tourist numbers across all three categories, albeit to varying degrees. It is also clear that holiday was a more common reason for people's visit than business and meeting friends and relatives.

In 1989, the UK was most popular as a holiday destination, with as many as 6.5 million overseas visitors coming here for this reason. Followed by four years of stability, this figure then saw a significant increase, reaching a high of 9 million in 1994. This peak was not maintained, as the number of visitors started to decrease steadily and hit a low of about 6.5 million in 2004. However, there was an immediate recovery such that visitor numbers reached 9 million again in 2009.

In contrast, business-related visits began at around 5 million in 1989, experienced a slight decline to just under 4.5 million in 1994, and then gradually increased over the next 15 years. By 2009, this category peaked at around 7.5 million, though the growth was relatively steady compared to holiday visits.

The number of visitors who came to meet friends or relatives showed a more modest upward trend. Starting at approximately 4 million in 1989, the figure climbed gradually, overtaking business visits in the early 2000s and reaching a high of roughly 7 million in 2004. However, this growth was not sustained, and by 2009, it had dropped back to around 5.5 million.

WRITING TASK 2

You should spend about 40 minutes on this task.

Directors of large organizations earn much higher salaries than ordinary employees do. Some people think it is necessary, but others are of the opinion that it is unfair.

Discuss both these views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Income disparity is a prevalent issue in this capitalistic world. For example, most managers and directors of large corporations make significantly more money compared to their employees. While some people argue that ordinary people deserve a higher pay, I believe that this practice is justified.

The proponents of pay gap suggest that ordinary workers have a greater workload. In their eyes, managers simply dispense all the clerical and admin work to their underlings as they go about their beautiful days free of stress. These might range from preparing coffee and running errands to sitting at a computer and crunching numbers - all in addition to their existing primary tasks, whether it is accounting or sales. While employers' jobs may be more important and so they deserve a higher pay for it, there is clear disproportion in the compensation for the effort that ordinary employees put in.

As unfair as it might seem, large company executives continue to earn big money - and deservedly so. Clearly, there is a greater level of risk involved in working at an organization as a manager or director. In times of crisis, for example, they are the ones that keep the "fortress" in place by paying for expenses from their own pocket, or they could have invested in the stocks of the company, making them eligible for bigger returns. Even more importantly, most executives have poured their soul and heart into their company, building it from the ground up since day one. Small wonder then their earnings are significantly higher than those of their employees, even if it is by an order of magnitude.

In conclusion, it makes sense that most people deem income disparity between employers and employees as unfair, as all the work seems to fall on the unfortunate ordinary workers. However, I would argue that executives and leaders are more than justified to their earnings – and for good reason.

WRITING TASK 1

You should spend around 20 minutes on this task.

The diagram below shows the process for producing bottled and canned carbonate drinks.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The diagram shows how carbonated beverages are produced. The water used in the production is first purified and then carbonated, after which it is enriched with flavor. The resultant beverage is then poured into different types of containers, before being ready for distribution.

In the first phase – purification – raw water undergoes through cleaning: first in a filter, where foreign particles are removed, and then in a tank with water softener and chemicals, where any possible contaminants are removed. This water is then pumped into a chamber which is heated underneath so that the water evaporates. The vapor rises and moves to a special cooling pipe located at the top of the chamber. As the vapor cools down, it turns into water again, which flows into a carbonation vat – a large container where water is infused with carbon dioxide.

In the next phase, the carbonated water is turned into soda. For this, it is forced into a mixing tank, where coloring, syrup, and flavor are also added from special containers underneath. Inside the mixing tank is a beater – a device that whirls the contents around, turning them into a homogeneous blend. The resulting beverage is filtered and is afterwards poured into either bottles or cans. These are then packaged into boxes and delivered to supermarkets.

WRITING TASK 2

You should spend about 40 minutes on this task.

In many countries, a small number of people earn extremely high salaries. Some people believe that this is good for the country, but others think that governments should not allow salaries above a certain level.

Discuss both these views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Salary capping on a governmental level is a controversial idea that some people agree with and others don't. I personally believe introducing upper limits on salaries is a bad idea.

On the surface, however, it might seem fair to cap salaries. The rationale behind this idea is rooted in the philosophy of equity: since all people are equal, which is written in numerous bills and laws, they should all get equal outcomes in terms of financial rewards for the work they do – at least to the extent this is possible. This philosophy is further underpinned by the belief that positions with extremely high salaries, such as CEOs or CFOs, are in no way superior to menial or manual jobs, such as those in plumbing or construction.

However appealing this reasoning might sound, it does not hold water. First, the financial outcomes of a job should be based on merit rather than equity. If the individuals who earn large amounts of money do so due to the unique skills they possess or the outstanding quality of work they provide, it is only fair to reward them accordingly. Second, the view that the job of a CEO is equal in value to that of a plumber is an illusion. In fact, it is often more challenging as CEOs are responsible for the livelihoods of hundreds, if not thousands, of people in that one wrong decision can lead to massive losses and layoffs.

Finally, the major reason against the salary capping policy is that the opportunity to earn more serves as an inspiration and an impetus for many to work not only harder but also smarter. Were salaries to be restricted, employees would become complacent, having little incentive to put in extra effort – an undesirable outcome for both the employees and the company they work for. It is in competitive environments that people and companies thrive, eventually improving their lives and those of others.

To conclude, while seemingly good, the idea that people in certain jobs should not be paid above a certain level will only be harmful in the long run as it, being built on erroneous assumptions, prevents progress.

WRITING TASK 1

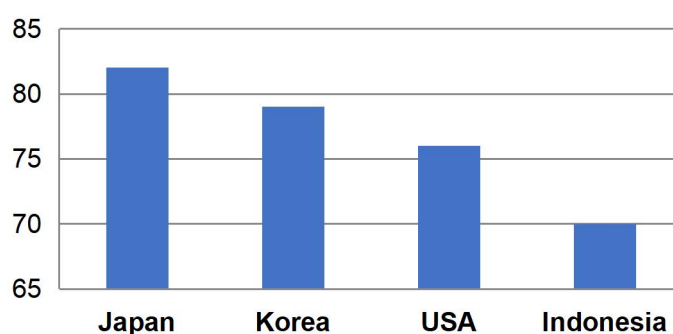

You should spend around 20 minutes on this task.

The bar chart below shows the information about the life expectancy in Japan, United States, Korea, and Indonesia and the table shows the change in the life expectancy between 1953 and 2008.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Life expectancy of people in 2008

Increases in life expectancy between 1953 and 2008	
Japan	+3.5%
Korea	+12.5%
United States	+3%
Indonesia	+15.7%

The bar chart shows average life expectancy in four countries in 2008, while the table shows the percentage change from 1953 to 2008 in the same countries.

Out of the four given countries, Japan had the longest life expectancy in 2008 – 82 years. Following some way behind came Korea (79 years) and USA (76 years). Indonesia was the country to show the shortest life span: 70 years, which was 12 years shorter than how long people lived in Japan.

As regards the percentage change, it increased in all the given countries. The United States and Japan saw the smallest growth, at 3% and 3.5% respectively. This was in stark contrast to the other two countries, which saw increases in double digits: Korea by 12.5% and Indonesia by 15.7%.

Overall, while life expectancy varied significantly across the given countries in 2008, it became longer in all over the 55 years. Notably, Japan – the leading country – showed very small growth, yet Indonesia – the country with the shortest life span – showed the largest increase.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people believe that children that commit crimes should be punished. Others think the parents should be punished instead.

Discuss both views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

All societies have systems in place that punish individuals for committing crime. Some people, however, suggest that child offenders must be an exception and that it is parents that have to face punishment for their child's criminal behavior. I do not think this opinion is justified and will argue that children must bear the legal responsibility themselves.

The reasoning behind the view that the punishment must be imposed on parents relies on two arguments. First, the offense might be seen as a direct result of upbringing – or the lack thereof. Indeed, a child is born a clean slate, with no knowledge of laws or moral norms. While this can be instilled by different parties, parents are the primary one because they spend more time with their child and have indisputable authority. The second argument might be rooted in the idea that the child, were they to be punished, might not be able to fully comprehend their wrongdoing due to their young age. Parents, on the other hand, will not only understand it but also be able to communicate it to their child in a manner and at a time that are most appropriate.

I, however, do not consider these arguments particularly convincing and believe it is the child who must be accountable by law for their actions. Punishing the offender lies at the core of all modern justice systems – this is how justice is served. Therefore, if the offender is not prosecuted, regardless of their age, the victim will not receive the justice they deserve. More important is the fact that by being punished, the child will indelibly learn that certain actions are unacceptable in society. If the child avoids punishment, on the other hand, they will learn that they can get away with deviant behavior and might continue engaging in it indiscriminately – an undesirable outcome for both the child and the society. Finally, a punishment on a young delinquent is, in essence, a punishment on the parents as well, who will inevitably experience a host of negative effects, from worries to legal fees.

To conclude, while the approach to juvenile delinquency which suggests punishing parents instead of the child has some underlying logic, it is very limited. Punishing the child is a more comprehensive approach as it benefits the victim, the child, and society on the whole.

WRITING TASK 1

You should spend around 20 minutes on this task.

The diagram below illustrate how recycled paper is made. Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The diagram shows how paper is recycled. The collected wastepaper is first made into pulp, which is then cleaned and treated with chemicals. The cleaned pulp is used as material that new paper is made from.

In the first phase, used paper is delivered to the recycling factory and placed onto a conveyor belt to be transported to the processing line. Here, the paper is dumped into a large vat with water and chemicals in order to be turned into pulp. This pulp proceeds to a large sieve where it is filtered, after which the mass is soaked in a container with water and soap – a procedure that removes the ink remaining from used paper. The dirty water is then pumped out from this container through a specially designated pipe, while the clean substance is blown to yet another container with water and chemicals to undergo the final cleaning stage.

In the ultimate phase, the resultant purified pulp is used to make the final product. For this, it is poured onto a conveyor belt, where heated rollers press it into thin sheets of paper. During this stage, the rollers and the paper have to be sprinkled with water to cool them down. Once dry, the paper is rolled onto reels and is ready for distribution.

WRITING TASK 2

You should spend about 40 minutes on this task.

In some parts of the world, many famous people are regarded as 'role models' and they are having an increasing influence on the young.

Is that a positive or negative development?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Younger people are susceptible to a whole host of influences. One recent and particularly controversial influence is celebrities. In my opinion, while famous people can admittedly inspire positive behaviors and values, the impact they have on the younger generation is mostly detrimental.

When it comes to the positive influence, one could make a case that many celebrities promote important values, such as hard work or empathy. Indeed, many emphasize effort, resilience, integrity, and similar qualities when they speak about their path to success. Some also engage in activism and donate money to charities - undeniably noble activities that should be promoted. However, I believe this positive influence only works in a small number of cases and is significantly outweighed by the negative aspects.

First and foremost, famous people present carefully curated personas to the public rather than their real selves, thereby imposing unrealistic ideals on the public. This means they might not reveal the whole truth and misrepresent what it took to achieve success. They might, for example, speak about hard work and resilience, while failing to mention their friends or relatives who introduced or recommended them to the right people. As a result, younger people often put enormous effort into pursuing what they cannot accomplish anyway, wasting their time and facing disappointment.

Even when celebrities are completely honest and talk about their genuine values, they talk to large audiences, which doesn't allow for personalization and nuance. This might lead to situations where an overall positive behavior might be negative for a specific young person who chooses to imitate it blindly due to the admiration they have for the famous person. For example, a celebrity might advocate for animal rights and promote a vegan diet. This diet, while generally an ethical and healthy choice, might lead to severe health consequences or lack of understanding among peers. It is thus best that young people rely on advice from mentors that are close – family, friends, and teachers or coaches.

To conclude, like any new phenomenon, celebrity culture has the potential to influence young people positively or negatively. I am convinced that even when famous people promote real values and try to set a good example, the outcomes are still more likely to be negative: young people are likely to be inspired to pursue faulty or irrelevant goals due to lack of truth or nuance in the inspiration they get.

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph below shows the production of three forest industry products in a European country, namely timber, pulp, and paper, from 1980 to 2000.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph gives information about the production of pulp, timber, and paper (in million tonnes) in one country in Europe between 1980 and 2000.

Overall, the production of all three types of products increased over the period, with paper manufacturing showing the largest rise. Notably, timber trended down in the second part of the period after an initial period of sharp growth.

Paper started at the lowest level among the three products, with 4 million tonnes. Showing consistent growth for 15 years, it reached 9 million in 1995. This was followed by a minor fall and a subsequent rise to 12 million – a figure that was the highest among the three.

Timber started as the second most produced commodity, at 5 million tonnes. It, however, quickly became the most produced one as the output doubled by 1985 and remained such until 1990 despite a fall to 8 million that year. After this, timber was produced in smaller quantities than the other two products, finishing the period at 7 million tonnes.

Finally, pulp manufacturing, unlike the other two products, saw a fall at the beginning of the period: from 6 million tonnes in 1980 to a mere 2 in 1983. The production then recovered quickly to reach 7 million in 1985, which was followed by a steady and consistent growth to 10 million tonnes by the end of the period.

WRITING TASK 2

You should spend about 40 minutes on this task.

It is the responsibility of schools to teach children good behaviour in addition to providing formal education.

To what extent to you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Whether schools should only focus on teaching knowledge or whether they should also aim to instill certain standards of behavior perceived as good is a contentious question. In my opinion, schools should not be expected to teach norms of good behavior.

First and foremost, the ideas of what constitutes good behavior vary widely. As a result, what is included in the curriculum or the code of conduct might be in conflict with what the student's family believes to be appropriate. For example, teachers might enforce discipline in class by discouraging any questions or deviations from the laid-out procedures. A child's parents, however, might encourage questions and rule breaking because these are considered to be signs of creativity and free thinking in the family. In other areas, such as gender roles or religious practices, the conflict of ideas might be even more dramatic. The clashes in instruction might lead to various undesirable outcomes: the child might become confused and disoriented, or potentially ostracized either at school or at home, or even hypocritical as they would have to constantly modify their behavior for different environments.

The second reason is that school students are already overburdened by the curriculum. In some countries, schools have a 6-day week, while in others, children stay at school until 4 or 5 pm. If good behavior was added as a separate subject, the school week or day would have to be extended even further. If good behavior was to be taught during other classes, students would have to be given more homework to compensate for the time lost. Either way, this would put an unwelcome strain on the children. Teaching children moral and social norms should thus be left to parents, who not only have the right to decide what norms to teach but also have the influence to do so: they spend more time with their child than any one teacher and can lead by example.

To conclude, it might seem tempting to place the responsibility for anything and everything related to child-rearing on schools—from knowledge to morals. Yet, I believe children are better served if they only get formal education at school. This ensures a more consistent and less demanding approach to teaching “good behavior”—a concept that involves many debatable issues that are best defined and instilled by families.

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph shows the percentage of households in one country that had various goods between 2001 and 2008

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart compares the proportion of households that owned a range of household items in 2001 and 2008. Overall, the percentage of households with all these appliances and devices increased, with the exception of those owning a telephone. While the telephone, microwave, and CD player were the most common items in both years, mobile phones, home computers, clothes dryers, and internet access became significantly more prevalent in 2008. It is also clear that mobile phone and internet ownership experienced the most substantial increases.

Focusing first on the more common items, around 95% of households owned a telephone in 2001, a figure that dipped slightly to 90% in 2008. In contrast, microwave ownership stood at 80% in 2001, 10 percentage points higher than households with a CD player. By 2008, both figures had risen to 90%. Clothes dryers were the next most common item in 2001, with 60% of households possessing one, and this figure rose to 70% by 2008.

The remaining items were much less common in 2001. Home computers had the highest ownership rate among them, at about 35%, which then rose significantly to 65% in 2008. Mobile phones also became one of the most widely owned devices, with ownership increasing sharply from 25% in 2001 to 80% in 2008. In 2001, the proportion of households with a dishwasher (20%) was twice that of those with internet access (10%) – the least common item on the list at the time. However, by 2008, internet ownership had increased sevenfold to 70%, while dishwashers, despite doubling to 40%, remained the least commonly owned item.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people believe that it is better language students in small classes. Others think the number of people in the classes doesn't matter

Discuss both these views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Many approaches have been proposed regarding the best way to teach languages. Some argue that smaller classes with fewer students lead to better outcomes, while others believe that class size has little or no impact on language acquisition. I personally agree with the latter view

No doubt, smaller classes allow for more individual attention. For example, if a student struggles with pronunciation or grammar, the teacher can notice it quickly and provide targeted help. In large classes, however, students might be overlooked, and their mistakes can go uncorrected, slowing down their progress. Smaller classes are also generally easier to manage. While the teacher can maintain discipline and keep students engaged with fewer distractions, it's harder to control noise, ensure everyone is paying attention, or involve every student in an activity in large groups. A well-managed classroom allows for smoother lessons and more time spent on meaningful language practice rather than dealing with disruptions, creating a more focused and productive learning environment.

However, I would argue that these perspectives are somewhat outdated and overlook the advancements in modern language teaching methods. First and foremost, technology has reduced the need for individual attention during lessons. With the rapid development of digital tools, language learning has become more accessible and personalized than ever before. Applications like Duolingo, Memrise, or Babbel allow students to practice vocabulary, grammar, and even pronunciation at their own pace, anytime and anywhere. As a result, even in larger classes, learners can receive tailored support outside school hours, making class size less important than in the past.

In addition to this, larger classes, while sometimes seen as a disadvantage, can actually create a rich environment for collaborative learning. With more students, there are greater opportunities for pair and group work, which is essential in language acquisition. Interacting with classmates through role-plays, discussions, and problem-solving tasks exposes learners to different accents, vocabulary choices, and speaking styles. This not only improves their listening and speaking skills but also boosts their confidence in using the language in real-life situations.

In conclusion, while smaller classes offer certain benefits, modern technology and collaborative learning in larger groups make class size far less significant in today's language education.

WRITING TASK 1

You should spend around 20 minutes on this task.

The diagram shows how Liverton Docks have changed since 1980.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The two maps illustrate the significant changes made to Liverton Docks between 1980 and the present day. Overall, the area has undergone a transformation from an industrial shipping dock into a modern, mixed-use recreational and residential area, with the introduction of several residential facilities including, an education center, hotel, apartments, and a river walk.

In 1980, Liverton Docks was an active industrial area. The river ran through the middle with both the northern and southern banks of the river featuring warehouses and cranes. Specifically, two large warehouses were located along the north bank, each accompanied by a crane, while the south bank had one crane and one warehouse.

Since then, the area has improved significantly. All the warehouses and cranes have been removed. On the north side of the river, the space has been replaced with an education centre, a sailing club, and a kid's playground, with a flood barrier installed at the eastern end of the river. The river itself now contains a ship museum, indicating a shift from commercial to cultural use.

On the south side of the river, the former warehouse and crane area has been redeveloped into a hotel, apartments, and a parking area, all connected by a river walk for pedestrians. Additionally, a bridge has been constructed over the river near the flood barrier, allowing access between the two sides.

Written by Jurabek Sanokulov (IELTS 9.0, W8.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think secondary school students should study international news as one of their subjects, while others believe that this is a waste of valuable school time.

Discuss both these views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In today's interconnected world, international news plays a vital role in shaping public opinion and influencing political decisions. As a result, some argue that it should be formally taught in schools. While this view has its merits, I believe making it a school subject would be impractical and potentially counterproductive.

Advocates for including international news in the curriculum argue that it would foster informed citizenship. In an age of misinformation and political polarization, equipping students with the skills to critically evaluate news sources and understand global events is essential. Proponents also highlight that, particularly in democratic societies, the ability to distinguish factual reporting from propaganda can contribute to more thoughtful political participation. Embedding such skills into formal education could, therefore, strengthen civic engagement from a young age.

Nevertheless, integrating international news as a distinct subject raises several concerns. First, it may inadvertently expose students to politically sensitive or controversial content, which could clash with family values or create ideological tension between schools and households. This is especially problematic in pluralistic societies where political beliefs vary widely. Second, secondary school students already face considerable academic demands, particularly in preparing for standardized exams and university applications. Allocating time to a news-focused subject could detract from core disciplines such as science, technology, and the arts, which are foundational for both higher education and career development.

In conclusion, although international news is undeniably important in the modern age, incorporating it as a standalone subject in schools presents challenges—ranging from potential ideological bias to the misallocation of limited instructional time. Therefore, while media literacy should be encouraged, it may be better integrated into existing subjects rather than introduced as a separate course.

WRITING TASK 1

You should spend around 20 minutes on this task.

The charts below show the percentage of male and female students of different age groups who studied in Australia for full-time and part-time education in 2006. Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar charts show the proportion of students, by gender, enrolled in part-time and full-time education in 2006. Overall, part-time education was more common among both men and women across most age groups, except for the oldest group (30+), where full-time study was slightly more prevalent. The most notable difference between part-time and full-time participation occurred in the 20–24 age category for both sexes.

Among males, the 20–24 age group had the highest participation in part-time education at 40%, which was more than three times the proportion enrolled full-time (12%). A similar trend appeared among 15–19-year-olds, though the gap was smaller, with 12% studying part-time versus 8% full-time. Participation in both study modes declined in the 25–29 group, reaching 8% for part-time and 6% for full-time. Interestingly, in the 30+ group, this pattern reversed, with 10% studying full-time and 8% part-time.

Female patterns closely mirrored those of males. The largest disparity was again in the 20–24 group, where 42% studied part-time compared to just 13% full-time. However, younger females aged 15–19 were more likely than males to study part-time (17%), though their full-time rate was lower at 7%. In contrast to all other groups, the 25–29 category saw parity, with both modes at 8%. For women aged 30 and above, full-time education was more popular, at 12%, compared to 6% in part-time study.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think it is better for one single legal system throughout the world. Other say countries should have their own law.

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

With the world becoming increasingly interconnected due to economic interdependence, some argue that there should be a single, unified legal system to govern all nations. However, I agree with those who believe that each country should establish its own legal framework.

Proponents of a global legal system highlight improved international cooperation as a key advantage. A unified legal framework would simplify cross-border challenges such as trade, immigration, and environmental protection, making collaborative efforts more effective. For instance, efforts to protect the Amazon rainforest have faced serious obstacles due to mismatches between Brazil's national laws and the goals of international environmental organizations. In addition, supporters argue that a single legal standard could help ensure basic human rights worldwide. In countries where local laws permit political repression, a global legal system might offer protection for those vulnerable to discrimination or abuse.

Creating a unified global legal system is far from possible. This is mainly because laws reflect the cultural and moral values of individual societies, which differ greatly across countries. For example, freedom of expression may be protected in one nation but restricted in another due to religious or political norms. In addition, implementing a single legal system would require countries to give up a degree of sovereignty, something most governments are unwilling to do. National laws are closely tied to identity and independence, so any attempt to replace them would likely face strong opposition.

In conclusion, while a unified global legal system may seem appealing in theory, it is impractical and culturally insensitive in practice. Legal systems must reflect the unique values and identities of each nation. Therefore, countries should retain the right to create and enforce their own laws, while working together through international agreements when necessary.

The charts below show the percentage of students following different types of course at Salisbury College in 1984, 1994 and 2004.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The pie charts illustrate the percentage of students enrolled in various types of media-based courses over a 20-year period, from 1984 to 2004, in 10-year intervals. Overall, face-to-face learning remained the most preferred option throughout the period, despite a steady decline. Meanwhile, online courses, introduced in 1994, experienced the most significant growth, eventually becoming the second most popular by 2004.

In 1984, traditional in-person classes dominated, with over two-thirds of students enrolled. Correspondence courses followed at 20%, while mixed media accounted for the remaining 13%.

By 1994, the educational landscape began to shift. Online learning emerged, attracting 12% of students. Face-to-face enrollment dropped to around 50%, while mixed media rose slightly to 15%. Interestingly, the share of students in correspondence courses remained unchanged at 20%.

The most dramatic changes occurred by 2004. Online courses saw a threefold increase, reaching 35%. Mixed media also grew to 20%, whereas correspondence courses experienced a sharp decline, falling to just 5%. Although in-person classes still attracted the highest proportion of students, their share had dropped further to 40%.

WRITING TASK 2

You should spend about 40 minutes on this task.

The best way to make roads safer is to make vehicle drivers take a driving test each year.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

An unprecedented rise in car ownership has coincided with a significant increase in road accidents. This troubling trend has compelled the relevant authorities to seek effective measures to ensure road safety, with annual tests for drivers seen as the best approach to achieve this. I fully support this approach for two main reasons.

First and foremost, this method would ensure that drivers regularly update their skills, encouraging them to follow traffic rules more diligently. Updating drivers' skills is particularly important today due to the sudden increase in the number of cars in recent years, as operating a vehicle now demands greater skill and awareness than in the past. Regular courses should focus on skills such as driving in tight spaces, maintaining a safe distance on congested roads, and adhering to speed limits in public areas.

Beyond improving drivers' practical skills, regular assessments can help drivers stay informed about changes in traffic laws and road systems, which are often overlooked once a license is obtained. Traffic regulations and road infrastructure evolve over time, especially with the introduction of new technologies such as electric vehicle lanes, smart traffic signals, and updated speed regulations. Without periodic education or testing, many drivers remain unaware of these changes, putting themselves and others at risk. Incorporating these updates into annual tests would ensure that all drivers remain current and capable of navigating the modern driving environment safely.

In conclusion, annual tests for drivers are one of the most effective ways to ensure road safety, as they help drivers regularly update both their driving skills and their knowledge of evolving traffic laws and infrastructure.

WRITING TASK 1

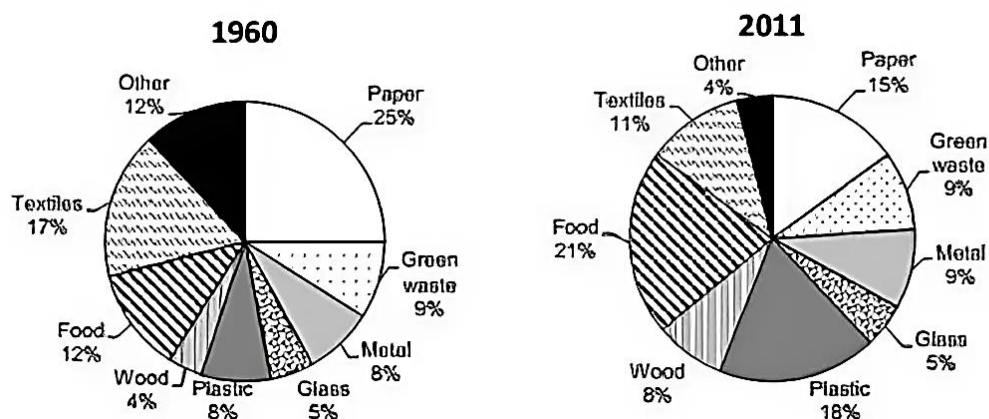

You should spend around 20 minutes on this task.

The charts below give information about different types of waste disposed of in one country in 1960 and 2011.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Waste disposal

The pie charts illustrate the proportions of different types of waste discarded in a certain country in 1960 and 2011. Overall, paper made up the largest share of waste in 1960, whereas food became the dominant category by 2011, showing the most significant increase. While most categories changed in proportion, the percentages of green waste, metal, and glass remained relatively stable.

In 1960, paper accounted for 25% of total waste, but this figure declined to 15% by 2011. In contrast, food waste rose sharply from 12% to 21%, representing the largest increase among all categories.

The proportions of glass, metal, and green waste saw little change over the period, remaining at around 9%, 8%, and 5% respectively in both years.

Other categories experienced more noticeable variations. Plastic waste doubled from 4% to 18%, and wood waste also saw an increase, rising from 4% to 8%. However, the share of textiles fell from 17% to 11%, and the category labeled "others" declined from 12% to just 4%.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some companies use money to support sports events. Some people believe that this has a negative impact on the world of sports.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

With sports becoming increasingly commercialized, there is a view that this has a detrimental impact on the world of sports. While I understand the concerns associated with this trend, I generally believe that corporate sponsorship is beneficial for sports overall.

The concerns are mostly related to the erosion of traditional sporting values. Historically, sport has represented integrity, perseverance, and the pursuit of excellence. However, over the past two decades, increasing commercialization has introduced external forces that can undermine these ideals. One notable example is *sportswashing*—a tactic where countries attempt to distract from poor human rights records by hosting major sports events. Qatar, for instance, has been widely criticized for using football to enhance its global image while facing accusations of mistreatment of migrant workers.

Despite these concerns, commercial involvement has played a crucial role in the growth and professionalization of modern sports. Sponsorships enable events to be organized on a much larger scale and with higher production quality. The English Premier League, for example, thrives largely due to corporate backing from global brands, allowing it to deliver a world-class experience to fans and players alike. Furthermore, increased financial support has improved athlete welfare, with professionals now receiving fairer compensation, access to better training facilities, and broader global exposure—all of which elevate the overall standard of the sport.

In conclusion, although commercialization has brought certain drawbacks, such as the risk of compromising sporting values, its overall impact has been positive. Thanks to corporate sponsorship, athletes enjoy greater financial rewards and professional support, while fans benefit from more exciting and accessible events. The key lies in ensuring ethical oversight to preserve the integrity of sport.

WRITING TASK 1

You should spend around 20 minutes on this task.

The bar chart below shows the proportion of renewable energy of total supply in 2000, 2004, and 2007.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart illustrates the changes in the proportion of renewable energy supplied in four countries, Australia, Germany, Norway, and Iceland, over the years 2000, 2004, and 2007.

Overall, all four countries experienced an increase in the share of renewable energy, with Norway showing the most significant growth. It is also clear that Norway and Iceland consistently generated higher proportions of renewable energy compared to Germany and Australia.

The share of renewable energy in Norway and Iceland remained consistently higher throughout the period. In Norway, renewable energy accounted for approximately 61% of the total energy supply in 2000. This figure rose steadily, reaching around 79% by 2007 — the highest among all countries throughout the period. Iceland followed a similar trend but at a slightly lower level. It started at 51%, increased to nearly 60% by 2004, before declining slightly to 55% in 2007.

In contrast, Australia and Germany relied much less on renewable sources. Australia maintained a relatively low and stable share, hovering around 10% throughout the entire period. Germany, however, saw a steady rise in renewable energy usage, growing from 11% in 2000 to approximately 19% in 2007.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people say that what children watch on TV influences their behaviour while others say the amount of time children spend watching TV influences their behaviour.

Discuss both views and give your opinion

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is an opinion that the amount of time children spend watching TV strongly influences their behavior. However, there are those who disagree, saying that it is the content of what children watch on TV that has a greater impact. In this essay, I will discuss both these opinions and agree with the latter.

Granted, one might argue that the amount of time children spend watching TV strongly shapes their behavior. The argument is that extended screen time can reduce children's attention spans, limit their social interactions, and lead to a sedentary lifestyle, which may contribute to behavioral issues such as hyperactivity or lack of discipline. For instance, imagine a child who spends the majority of their free time watching TV instead of engaging in outdoor activities or interacting with peers. Over time, this lack of physical activity and social engagement could lead to difficulties in maintaining focus at school and forming healthy relationships, ultimately influencing the child's behavior negatively.

As reasoning as this argument might sound, it has some flaws. The primary flaw in this argument is that it overlooks the critical role of content in shaping behavior. The amount of time spent watching TV does not necessarily correlate with negative behavior; it is the nature of the content that children are exposed to that plays a more significant role. For example, if a child spends an hour watching a documentary about nature, they might develop a curiosity and appreciation for the environment. On the other hand, a child who spends the same amount of time watching a violent cartoon may start imitating aggressive behaviors. Thus, focusing solely on the quantity of TV time fails to address the underlying issue of content quality.

Considering this, I believe that the influence of what children watch on TV is far stronger. Content that portrays violence, unhealthy relationships, or unrealistic scenarios can shape children's perceptions of the world, leading them to imitate negative behaviors. For instance, I recall a friend whose child started mimicking the behavior of a rude character from a popular cartoon. Despite the limited amount of TV time allowed, the child's behavior became noticeably more disrespectful after watching the show. This goes to show the importance of monitoring the content children consume rather than just limiting the time they spend in front of the screen.

In conclusion, while the amount of time children spend watching TV can influence their behavior, I believe that it is ultimately the content of what they watch that has a more profound impact.

WRITING TASK 1

You should spend around 20 minutes on this task.

The charts below show the qualifications of staff in an advertising company in 1990 and 2010.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The pie charts illustrate the qualifications of staff within an advertising company in 1990 and 2010, categorized by academic level and field of study (Art or Science).

Overall, a clear and significant shift occurred in the company's staffing profile over the two decades. The workforce became markedly more qualified, with PhD holders representing a much larger segment in 2010, primarily at the expense of employees with a First Degree. Notably, the proportion of staff with Master's degrees remained remarkably stable throughout the period.

The most dramatic changes occurred at the highest and lowest ends of the qualification spectrum. In 1990, staff with a First Degree made up a substantial 35% of the workforce (20% in Science and 15% in Art). However, by 2010, this group had shrunk to just 13%. This decline was mirrored by a surge in PhD holders, whose representation more than doubled from 15% in 1990 to 35% in 2010, largely driven by a massive increase in Science PhDs from 13% to 30%.

In contrast to these significant shifts, the proportion of employees with a Master's degree showed considerable stability. In 1990, Master's degrees accounted for exactly half of all qualifications (29% in Science, 21% in Art). Twenty years later, this figure was almost unchanged at 52% (29% in Science, 23% in Art), indicating that while the company's hiring trends favoured more advanced degrees over entry-level ones, the mid-tier qualification of a Master's degree remained a consistent and core component of the staff.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think that hosting an international sports event is good for the country, while some people think it is bad.

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Some people argue that hosting international sporting events brings enormous benefits to a country, while others claim that these events are a waste of resources and leave long-term problems behind. In this essay, I will discuss both views and argue in favor of the former.

On the one hand, critics of hosting major sporting events such as the Olympics or the FIFA World Cup often point to the massive financial burden they impose on host countries. These events require the construction of expensive stadiums, transportation systems, and infrastructure upgrades—projects that can cost billions of dollars. In many cases, these facilities become "white elephants" after the event ends, rarely used and costly to maintain. A notable example is the 1976 Montréal Olympics, which left the city with debt that took decades to repay. Additionally, some argue that the bidding process for such events is often plagued by corruption, and the resources allocated to them could be better spent on healthcare, education, or social welfare.

Despite these concerns, I believe that the long-term advantages of hosting international sports events far outweigh the drawbacks. Firstly, these events can significantly boost the economy through tourism, job creation, and international investment. For example, Barcelona's hosting of the 1992 Olympics led to the transformation of its waterfront, turning the city into a popular tourist destination. Secondly, large-scale events bring global attention and enhance the international image of the host country, which can lead to further economic opportunities. Finally, sporting events foster a sense of national pride and unity. Citizens often come together to support their athletes, which can create lasting social cohesion and a stronger national identity.

Moreover, many of the problems associated with these events can be avoided with proper planning and governance. Instead of building permanent facilities, countries can opt for temporary or modular stadiums. By distributing events across several cities or regions, the benefits can be more widely shared and the burden on a single city reduced. With transparent budgeting and accountability, governments can ensure that public funds are used responsibly. Legacy programs, such as youth sports development and community events, can also ensure that the excitement and investment in sport continue well after the event ends.

In conclusion, although some people view international sporting events as a financial risk with limited long-term value, I believe they are a powerful tool for economic growth, global recognition, and social unity—provided they are managed carefully and inclusively.

WRITING TASK 1

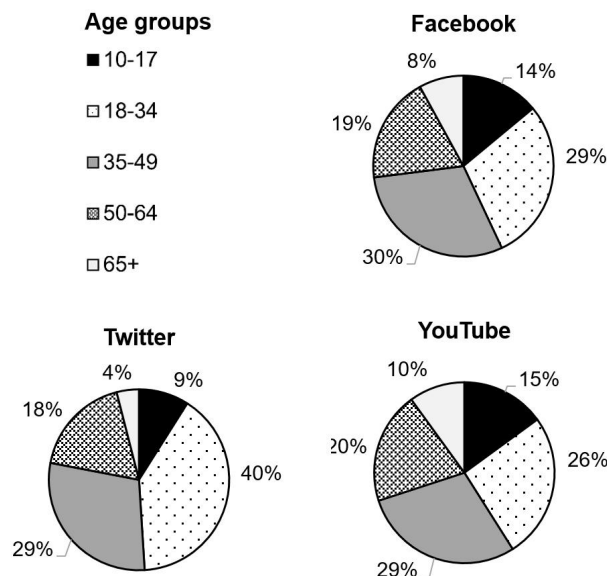

You should spend around 20 minutes on this task.

The pie charts below compare the percentages of users across different age groups on Twitter, Facebook, and YouTube.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Percentage of users on social media, by age group

The pie charts show the age distribution of users on three social media platforms: Facebook, Twitter, and YouTube. Overall, distinct patterns can be observed across age groups for each platform. Users aged 18–34 and 35–49 consistently represented the largest segments of users, while the 65+ age group generally accounted for one of the smallest proportions. Notably, the 50–64 age group held a remarkably similar share of users across all platforms

The 18-34 and 35-49 age groups consistently represented the largest proportions of users across all platforms. On Facebook, individuals aged 35-49 constituted the largest user base at 30%, closely followed by the 18-34 age group at 29%. YouTube showed a similar trend, though with slightly lower overall percentages for these groups: 35-49 year olds accounted for 29% of users, which was 3 percentage points higher than their 18-34 counterparts (26%). In contrast, Twitter presented a different pattern, where the 18-34 age group was the most active, making up a significant 40% of users, compared to 29% for the 35-49 age group.

The remaining age groups (10-17, 50-64, and 65+) generally showed lower user activity. On Facebook, the 50-64 age group accounted for a notable 19% of users, a higher share than both the 10-17 year olds (14%) and the 65+ category (8%). Twitter presented a similar picture for these demographics: the 50-64 age group again had the highest proportion among them at 18%, surpassing the 65+ users (9%) and the 10-17 age group (4%). On YouTube, the user distribution among these three less active age segments was somewhat more balanced. Here, the 50-64 age group also constituted the largest share at 20%, followed by the 65+ age group at 15%, and the 10-17 age group at 10%.

WRITING TASK 2

You should spend about 40 minutes on this task.

Research shows that increasing numbers of people are now living in mega-cities: cities of more than 20 million inhabitants.

Is this a positive or negative development?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Research shows that more and more people are now residing in mega-cities, which have populations exceeding 20 million. I believe this is a negative development, as overcrowding and urbanization can lead to strained infrastructure and environmental degradation.

Firstly, overcrowding places immense pressure on infrastructure. When the population grows due to an influx of residents, essential services such as transportation, housing, and sanitation often struggle to meet demand. This can significantly impact the quality of life for local residents. Take Tashkent, for instance – the capital of Uzbekistan where the government frequently struggles to provide basic services like hot water and electricity during the winter months, largely due to the sheer number of people living in the city. This illustrates that if the government is unprepared, urban residents may face considerable challenges in maintaining a decent standard of living.

Secondly, urban expansion also leads to environmental degradation. This is because green spaces and agricultural lands are replaced with concrete to accommodate ever-increasing numbers of new arrivals. As a result, biodiversity is lost, and natural ecosystems are disrupted, which can have long-term consequences for the planet. Moreover, increased construction and industrial activity often contribute to higher levels of air and water pollution, further harming both the environment and public health. These negative effects, if ignored for too long, can become irreversible, making urban living unsustainable for future generations.

In conclusion, the rapid urbanization and growth of mega-cities present significant challenges, making it a negative development overall. Overcrowding strains infrastructure, reducing the quality of life for residents, while urban expansion disrupts ecosystems and accelerates environmental degradation.

WRITING TASK 1

You should spend around 20 minutes on this task.

The maps show a university library in 2005 and the same library today. Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The two maps illustrate how a university library looked in 2005 and its appearance today, after a significant modernization project. Overall, it is evident that the development brought about dramatic changes to the space, with the layout being largely reconfigured to prioritize technology and individual study over traditional book storage and staffed services.

In 2005, the library was a more conventional space. The center of the room featured large, communal study tables, while the right-hand wall was equipped with desks holding university computers. A large, manned desk for book borrowing and returns, along with an adjacent library office, formed the primary service point. Bookshelves lined the top, left, and bottom walls of the library, housing the main collection.

By the present day, following the refurbishment, the library has transformed considerably. The construction of new facilities led to the replacement of the old furniture; the central study tables gave way to rows of private study desks, and the university computers were removed in favor of desks for students' personal laptops. The staffed counter and office have disappeared entirely, replaced by automated book borrowing stations on the left. Furthermore, the bookshelves on the left and bottom have been removed to create more space for laptop desks and the new automated systems, leaving only the shelving on the top wall intact.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think paying taxes is a big enough contribution to their society, while others think people have more responsibilities as members of society than only paying taxes.

Discuss both these views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Some people argue that paying taxes is the only obligation a citizen has towards society, while others believe that individuals have broader responsibilities beyond financial contributions. In this essay, I will explore both perspectives and agree with the latter.

On the one hand, there is a belief that the primary civic duty of individuals is to pay taxes. Taxes fund essential services such as healthcare, education, infrastructure, and public safety, all of which benefit society as a whole. Those who hold this view argue that citizens contribute to national development by fulfilling this financial obligation. In their opinion, as long as people pay their taxes honestly and on time, they are fulfilling their role in maintaining a functioning and stable society. From this perspective, demanding more involvement from individuals—such as volunteering or community service—can be seen as unnecessary or even burdensome, especially for those already under financial stress.

Despite these arguments, I believe that social responsibility involves more than just financial transactions. A well-functioning society depends not only on infrastructure and services but also on social trust, cooperation, and active engagement from its members. Actions such as helping neighbors, participating in community projects, and supporting charitable organizations play a crucial role in building a sense of belonging and cohesion. These efforts create a more empathetic and inclusive environment, especially in areas where government support may be limited. Unlike taxes, which are compulsory and impersonal, these voluntary contributions are often motivated by a genuine desire to improve the lives of others. In societies where citizens actively take part in social life, there is usually a stronger sense of unity and resilience.

Moreover, relying solely on taxes can lead to a fragmented society in which individuals feel disconnected from one another. While taxes can fund public goods, they cannot replace the human connection and solidarity that come from shared efforts. Countries with a strong culture of civic participation often report higher levels of happiness, trust, and cooperation. This suggests that active engagement is not only beneficial for the community but also for individual well-being.

To sum up, while paying taxes is a vital component of civic responsibility, it should not be seen as the only duty a citizen owes to society. Financial contributions alone are not enough to build strong, compassionate, and cohesive communities. It is through additional efforts—such as volunteering, supporting others, and engaging in local issues—that individuals truly contribute to the well-being of society.

WRITING TASK 1

You should spend around 20 minutes on this task.

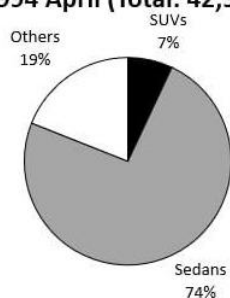

Write at least 150 words.

The pie charts show the sales of new cars in Australia in 1984, 1993 and 2013.

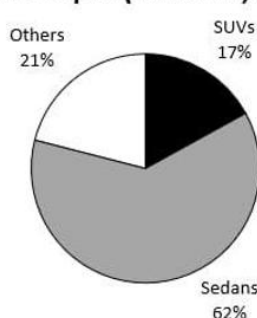

Summarise the information by selecting and reporting the main features and make comparison where relevant.

Write at least 150 words.

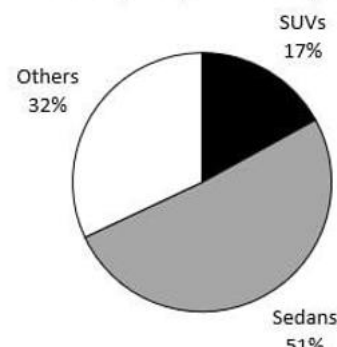

1994 April (Total: 42,900)

2004 April (Total: 71,000)

2013 April (Total: 85,000)

The pie chart illustrates the percentage distribution of new car sales in Australia by type — SUVs, Sedans, and Others — during April in the years 1984, 2004, and 2013. Overall, sedans remained the most sold category across all three years, although their proportion declined noticeably. Meanwhile, both SUVs and other vehicle types saw a gradual increase in their market share, with the 'Others' category experiencing the most significant rise.

In April 1984, sedans dominated the Australian car market, representing 74% of all new car purchases out of a total of 42,900 vehicles. SUVs accounted for only 7% of sales, making them the least popular option at the time. Vehicles classified as 'Others' made up 19%, showing a modest share in comparison. By 2004, the sedan segment had dropped to 62%, a decline of 12 percentage points, while SUV sales had more than doubled to reach 17%. The proportion of 'Others' also experienced a slight increase, rising to 21% of 71,000 total units sold.

In the final recorded year, 2013, total sales reached 85,000 units. The sedan category continued its downward trajectory, decreasing to 51%. Despite this, SUVs maintained their previous share of 17%, indicating stable demand. The most substantial growth was seen in the 'Others' category, which climbed to 32%, marking an 11-percentage-point increase from 2004.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think history has little or nothing to offer, while others say the study of the past helps us understand the present.

Discuss both viewpoints and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

The relevance of history has been the subject of public debate lately. It is believed by some that this field is of little or no importance, whereas others maintain that it assists in illuminating present events. In my view, history should be an integral part of our lives and any education system, as it fosters cultural identity and aids in resolving current political, scientific, and social crises.

Proponents of the former view may have some valid points in their arguments against the practicality of history in today's world. One reason is that in today's STEM-driven society, history may seem to have lost its significance. As these subjects require technical expertise more than any other skill, time could be better diverted from history into strengthening knowledge in relevant scientific fields, possibly rendering history less valuable. Another and perhaps more significant rationale is the biased nature of historical accounts, which are often irrefutable. History has long been written by the victors—typically colonial or authoritarian powers—who have used it to suppress dissenting views and legitimize their conquests, including genocides of native and indigenous populations, by portraying these groups as primitive and hostile. Therefore, it might seem reasonable to argue that history is flawed and fundamentally skewed.

Notwithstanding the above view, I firmly believe that history is a powerful tool in today's globalized world and continues to hold immense value. Firstly, it empowers marginalized groups by helping them reclaim their identity and dignity through understanding their past. This can help these communities build confidence and advocate for justice. For example, some Korean women have demanded reparations from the Japanese government and soldiers for the atrocities committed during wartime. Furthermore, history is closely intertwined with disciplines such as economics, politics, and sociology. Studying past responses to economic downturns allows economists and policymakers to develop effective strategies to prevent similar future crises. Similarly, in politics, historical understanding can aid leaders in addressing long-standing tensions like the Palestinian-Israeli or Korean-Japanese conflicts.

In conclusion, although some may dismiss the importance of history due to its perceived irrelevance or subjectivity, I am utterly convinced that it remains a vital academic discipline. It empowers the oppressed and paves the way for addressing global, social, and economic challenges.

The table shows the production of milk annually (in liters) in four countries in 1990, 2000 and 2010.

Summarise the information by selecting and reporting the main features and make comparison where relevant.

Write at least 150 words.

Nations	1990	2000	2010
Netherlands	11,262,000	11,155,000	11,466,000
Austria	11,246,000	11,105,000	9,165,000
Tanzania	87,000	142,000	155,000
Guatemala	26,000	55,000	84,000

The table illustrates the annual milk production, measured in litres, in four countries—Netherlands, Australia, Tanzania, and Guatemala—in the years 1990, 2000, and 2010. Overall, the Netherlands consistently produced the most milk across all three years, while Guatemala recorded the lowest figures. Notably, while milk output declined in Australia over time, it increased in the other three countries, with the most dramatic growth seen in Guatemala.

In 1990, both the Netherlands and Australia produced similar amounts of milk, at 11,262,000 and 11,246,000 litres respectively. However, over the next two decades, contrasting trends emerged. By 2010, the Netherlands experienced a slight overall increase, reaching 11,466,000 litres, despite a small dip in 2000. Conversely, Australia saw a steady decline in production, falling to 11,105,000 litres in 2000 and further to 9,165,000 litres in 2010. Despite this drop, Australia remained among the top producers.

Among the remaining two countries, Tanzania showed modest but consistent growth. It produced 87,000 litres in 1990, rising to 142,000 in 2000 and peaking at 155,000 litres in 2010. Guatemala, which had the lowest starting point of 26,000 litres in 1990, more than tripled its output to 84,000 litres by 2010. Although its production remained far below the other nations, its relative growth was the most significant.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people say free time activities for children should be organized by parents. Others say that children should be free to choose what they do in their free time.

Discuss both viewpoints and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Some people believe that parents should organize their children's free time activities, while others argue that children should have the freedom to choose how they spend their leisure time. Although giving children more autonomy may have some advantages, I believe that parental involvement is more beneficial for a child's overall development and safety.

Supporters of children's independence in free time highlight two key benefits. First, when children are allowed to choose what they do, they develop a stronger sense of responsibility. For instance, selecting an activity like sketching or puzzle-solving helps them learn to manage time and make decisions independently. Second, unstructured time often boosts creativity, as it encourages children to use their imagination. Playing freely—such as inventing stories with toys or building with blocks—can stimulate cognitive growth and innovative thinking.

In contrast, others argue that parents should guide their children's leisure activities for two main reasons. One reason is that children often lack the maturity to make balanced decisions about their free time. Without guidance, many would likely overuse screens or avoid physically engaging tasks. Another concern is safety and overall development. By planning activities such as sports, reading sessions, or educational games, parents can ensure their children are gaining essential life skills in a secure and structured environment—one that supports both learning and emotional growth.

In conclusion, while free choice in leisure can nurture creativity and decision-making, parental organization ensures a more well-rounded and safe experience. Therefore, I strongly believe that parents should take the lead in planning their children's free time to support healthier and more productive outcomes.

The diagram shows how rainwater is collected for the use of drinking water in an Australian town.

Summarise the information by selecting and reporting the main features and make comparison where relevant.

Write at least 150 words.

Rainwater is initially collected from the roofs of houses when it rains. The collected water flows through drainpipes attached to each house and is directed into a central underground pipeline. This shared pipe channels the rainwater into a water filter. Once filtered, the cleaner water is transferred into a dedicated storage tank, where it is temporarily held before treatment.

After storage, the water undergoes a chemical treatment process to ensure its safety for consumption. During this phase, specific chemicals are added to eliminate harmful microorganisms or pollutants. Following chemical treatment, the purified water is pumped through pipes and made available to households for drinking. This process allows rainwater to be reused efficiently and converted into potable water through a series of systematic steps.

You should spend about 40 minutes on this task.

The best way to teach children to cooperate is through team sports at school. To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

The most effective method to instil cooperation in children is believed to be participation in team sports organised at school. I strongly agree with this view, although other methods such as group projects in classrooms also contribute to developing teamwork skills. Team sports, however, provide a more dynamic and authentic environment for fostering cooperation.

Some argue that cooperation can be effectively cultivated through alternative educational activities such as classroom-based group assignments or drama performances. Firstly, when children engage in academic group work, they learn to share responsibilities and rely on each other's contributions to achieve a collective goal. For example, preparing a science project as a group requires children to divide tasks, meet deadlines, and reconcile differing opinions—all of which mimic real-life collaborative scenarios. Secondly, school plays or art performances also necessitate coordination. Children must learn to synchronise actions and respect each participant's role to ensure a successful outcome. These activities, while less physically demanding, still emphasise the importance of mutual support and shared success, which are central to cooperation.

Despite the above, I firmly believe that team sports are a far superior means of teaching children how to cooperate. To begin with, team sports such as football or volleyball naturally demand high levels of communication, trust, and coordination. Players must constantly strategise together, adjust to each other's strengths and weaknesses, and make quick decisions in high-pressure situations. These experiences mirror real-world team dynamics more closely than classroom tasks. Furthermore, sports often involve dealing with failure and learning how to support teammates emotionally—a crucial component of long-term cooperative behaviour. For instance, when a team loses, children learn to stay united, encourage one another, and prepare collectively for future success. This emotional bonding—often intensified through shared physical exertion—builds a deeper sense of responsibility and interdependence.

In conclusion, although classroom activities such as group projects and performances offer children some exposure to teamwork, the interactive, real-time, and emotionally engaging nature of team sports makes them a significantly more effective tool for teaching cooperation. Therefore, I strongly support the view that participation in school sports is the best way to develop this essential life skill.

WRITING TASK 1

You should spend around 20 minutes on this task.

The pie charts show energy sources in Australia in 2008 and predictions for 2030

Summarise the information by selecting and reporting the main features and make comparison where relevant.

Write at least 150 words.

The charts illustrate the distribution of energy sources in Australia in 2008 and provide projections for 2030. Overall, in 2008, coal was the dominant energy source in Australia's energy mix, while oil and gas also accounted for significant shares. By 2030, coal's contribution is expected to decline substantially, whereas gas and certain renewable sources such as wind and geothermal are projected to increase, although renewables overall will remain a small fraction.

In 2008, Australia's energy production was heavily reliant on fossil fuels, with coal, oil, and gas dominating the energy mix. Coal was the largest energy source, accounting for 39.00% of the total, followed by oil at 32.50%. Gas ranked third among the major contributors, comprising 22.90%. In stark contrast, renewable sources played a minimal role. Hydro power made up just 0.20%, solar contributed 0.80%, and wind stood at 0.30%, with all renewables combined totaling only 1.30%. Meanwhile, other sources accounted for 4.30%, which was notably higher than the total contribution from renewable energy.

By 2030, significant changes are projected in the energy landscape, particularly among fossil fuels and emerging renewable sources. The proportion of oil is expected to rise slightly to 35.00%, while coal is forecast to experience a sharp decline of 16.7 percentage points, falling to 22.30%. Gas usage is anticipated to increase considerably, reaching 32.00%, almost matching the share of oil. Among renewables, geothermal energy, not present in 2008, is projected to grow to 4.30%, becoming the most prominent renewable source. Wind and hydro are expected to rise modestly to 0.90% and 0.70% respectively, while solar is not included in the 2030 data. The contribution from other sources is predicted to remain unchanged at 4.30%.

Written by Temurbek Akbaraliyev (IELTS 8.5, W7.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

In some countries, the numbers of children aged 15 and younger are increasing dramatically.

What are the current and future effects of an ever-increasing population?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In several nations, the population of children aged 15 and younger is growing at an unprecedented rate, which has triggered concerns about its implications for both the present and the future. While some people believe this demographic shift offers long-term economic advantages, I strongly argue that its negative effects—particularly on education and public resources—are far more significant.

Some argue that a larger young population can contribute positively to a country's future development. One reason is the potential for a more dynamic and abundant workforce in the coming years. As these children grow older, they may become productive citizens who drive innovation and economic growth. For instance, countries with a youthful demographic, such as India, are often perceived to have a demographic advantage over aging populations. Moreover, young people tend to be more tech-savvy and adaptable to modern advancements. This can foster a culture of creativity, entrepreneurship, and progress. However, these benefits depend heavily on whether the government can provide high-quality education, job opportunities, and long-term economic planning.

Despite these points, the rapidly increasing number of young people presents serious challenges that often outweigh potential advantages. A primary concern is the pressure it places on the educational system. Overcrowded classrooms, a shortage of qualified teachers, and limited access to academic resources can severely impact the quality of education. In such conditions, many students fail to reach their full potential or drop out entirely. Another serious issue is the burden on public infrastructure and essential services. Governments must invest heavily in healthcare, housing, and food supply to meet the basic needs of a growing population. If these services are not scaled up quickly, the result can be widespread poverty, malnutrition, and even political instability—all of which can obstruct long-term development.

In conclusion, although a growing youth population is believed to bring future benefits such as a stronger labor force and innovation, the more pressing issues—like strained education systems and overstretched public services—pose greater risks in both the short and long term. I firmly believe that the disadvantages of an ever-increasing child population are more significant and require urgent attention.

WRITING TASK 1

You should spend around 20 minutes on this task.

The diagram below shows the recycling process of aluminium cans.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The diagram shows the steps involved in recycling aluminium cans. Overall, the production can be divided into three main stages: starting with the collection and preparation of the used cans, followed by melting and reforming the metal, and finally, manufacturing new cans as the end product. Also, this process is an industrial one, which requires six weeks to complete.

The initial steps of the process are focused on collection and cleaning. Firstly, waste cans are collected by a truck and transported to a deposit facility. There, they are cleaned with water before being crushed into compact blocks. This is followed by further processing and a chemical treatment designed to erase any ink or coatings from the cans' surfaces.

Following the preparation stage, the processed aluminium is subjected to intense heat in a furnace until it melts. This liquefied metal is then poured into moulds to form solid aluminum ingots, which are subsequently weighed. The next crucial step involves passing these ingots through a roller to flatten them into thin sheets. The final stage involves using these sheets to manufacture new cans, creating a final product that's ready for use and completing the recycling loop.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think that people commit crime because of poverty and social problems, while others think it is because of their bad nature.

Discuss both these views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is an opinion that crime is often a result of poverty or other problems in society. However, there are those who disagree, saying that it is primarily driven by an individual's personality or inherent nature. In this essay, I will discuss both these views and agree with the former.

Granted, one might argue that criminals possess inherent characteristics that lead them to commit criminal acts. Traits such as impulsivity, aggressiveness, and psychopathic tendencies are often linked with a high likelihood of criminal behavior. These personality traits may stem from a poor family environment or upbringing, where immoral actions are normalized. As a result, some individuals who are less conscientious may commit crimes without considering their long-term consequences. Additionally, certain disorders such as antisocial personality disorder and psychopathy, which include traits like manipulation, deceit, and a lack of empathy, are commonly observed in repeat offenders.

Despite the arguments above, I believe that financial hardship and social problems are the primary causes of crime. Many individuals turn to crime simply because they struggle to make ends meet or are unable to find stable employment. Even when they are fully aware of the potential consequences, desperation may drive them to break the law. This problem is further exacerbated by weak social systems, particularly in societies where income inequality is pronounced. In areas with high crime rates, poor taxation and inadequate social welfare systems often fail to support vulnerable populations. These structural issues make it difficult for people to climb the social ladder or secure a stable livelihood. When such core societal problems are overlooked by the government, crime becomes a more likely outcome. In contrast, countries like Norway and Denmark—with their strong social welfare systems that provide unemployment benefits, universal healthcare, education, and affordable housing—tend to have significantly lower crime rates.

To sum up, while some argue that inherent characteristics, such as psychopathic traits or mental disorders, are the root causes of criminal behavior, I believe that crime is more often a consequence of societal conditions. Factors like poverty and a weak social support system can push individuals to commit crimes as a means of survival or to meet their basic needs.

WRITING TASK 1

You should spend around 20 minutes on this task.

The chart below gives information about the average annual pay of doctors and other workers in seven different countries in 2004.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar graph compares the annual earnings of doctors and other professionals in seven countries in 2004, measured in US dollars. Overall, doctors earned significantly more than other professionals in every country. The highest salaries for both groups were recorded in the United States, while the lowest were seen in the Czech Republic. The widest pay gap between the two groups was also observed in the US.

Looking at doctors first, American medical professionals topped the chart with an annual income of around \$120,000, far surpassing that of doctors in France, who earned \$80,000. The Czech Republic offered the lowest doctor salaries at \$40,000, just half of France's figure. In the remaining countries, doctor salaries ranged from \$55,000 to \$65,000, with Finland at the lower end (\$55,000) and Switzerland at the upper end (\$65,000), while Italy and Germany paid \$60,000 and \$61,000 respectively.

Salaries for other professionals were notably lower across all countries. The highest figures were in the US (just under \$45,000) and Switzerland (\$40,000). In contrast, France offered around \$25,000, slightly more than Italy, Germany, and Finland, each of which paid \$20,000. Once again, the Czech Republic had the lowest figure, at just \$15,000 per year.

Written by Sirojiddin Erkabayev (IELTS 8.5, W7.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people believe that teenagers should concentrate on all school subjects equally. Others believe that teenagers should focus on the subjects that they are best at or that they find the most interesting.

Discuss both these views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is a debate over which subjects students should focus on more in school, with some saying all subjects deserve equal attention, while others believe students should choose the ones they are good at or interested in. I agree with the former view.

Those who support the idea that students should concentrate on the subjects they are good at or interested in argue that this approach leads to greater motivation and better learning outcomes. When learners are passionate about a subject or naturally excel in it, they are more likely to put in the effort and perform well. This can boost their confidence and help them develop a clear career path early on. Moreover, forcing students to devote equal time to all subjects, including those they struggle with or dislike, may lead to frustration and burnout. Supporters of this view believe that education should nurture individual strengths rather than impose a one-size-fits-all curriculum.

These arguments notwithstanding, I still support the idea that students should strive to study all subjects. First and foremost, each subject contributes uniquely to a learner's growth: mathematics sharpens logical thinking, literature enhances language and empathy, while science fosters curiosity and problem-solving skills. By studying all subjects equally, students gain a broad knowledge base and develop diverse skills that are valuable in both academic and real-life situations. Moreover, young learners may not yet know where their true interests or strengths lie; exposing them to a variety of disciplines allows them to discover their passions gradually. Therefore, giving equal importance to all subjects ensures balanced intellectual development and keeps future opportunities open.

In conclusion, although studying only certain subjects offers several benefits, such as increased motivation and reduced burnout, the advantages of studying a range of subjects are far greater. It allows students to develop diverse skills and to discover their strengths over time, contributing to a well-rounded education.

WRITING TASK 1

You should spend around 20 minutes on this task.

The line graph shows the level of satisfaction with health care system in four countries from 1991 to 2007.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The line graph shows the percentage of people who were satisfied with their healthcare system in Canada, the UK, the Netherlands, and the US between 1991 and 2007. Overall, satisfaction levels remained stable in all countries except Canada, which began with the highest rate but experienced a sharp decline followed by partial recovery. As a result, the Netherlands had the highest satisfaction for most of the period, while the US consistently recorded the lowest levels.

In 1991, nearly two-thirds of Canadians were satisfied with their healthcare, but this figure dropped dramatically to just under 20% before rising again to around 40% by the end of the period. In contrast, satisfaction in the Netherlands started at about 48% and remained relatively steady throughout.

Satisfaction levels in the UK and the US were much lower than in Canada and the Netherlands but showed gradual increases. In 1991, the UK had a satisfaction rate of around 22%, more than twice that of the US at 10%. Although both countries followed an upward trend, the UK saw a more noticeable rise, reaching 30% by 2007. The US, on the other hand, showed minimal improvement, ending the period at just over 12%. Throughout the timeframe, the gap between these two countries remained wide, and both continued to rank below the other two nations.

WRITING TASK 2

You should spend about 40 minutes on this task.

Many people aim to achieve a balance between work and other parts of lives, but few people achieve it.

What are the causes of the problem?

How to overcome it?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Striking a perfect balance between work and personal life has long been an ultimate goal, yet only a few succeed in doing so. While this problem can be attributed to lenient laws protecting workers' rights and distractions of technology, the solution lies in government involvement and better use of modern devices.

One contributing factor to the issue is the government's leniency toward workers' rights. Even though people are lawfully allowed to work from nine to five, this law is poorly enforced. As a result, employers can take advantage of their employees without facing serious consequences. This has always been an issue in my country, Uzbekistan, where people stay in the workplace even after their shift is over, often against their will. Even when people go home, they often turn to their phones, laptops, or other devices for relaxation or to continue working. This usually prevents them from having quality family time, engaging in hobbies, and recovering. This mismanagement can lead to fatigue and burnout, making it even more challenging to achieve a balance between work and other aspects of life.

However, there are several ways by which the problem can be alleviated. One possible solution would be for the government to implement harsher punishments and stricter enforcement of these laws when workers' rights are violated. This would give workers more control over their free time, which could then be better spent on personal matters such as spending time with family, pursuing hobbies, or simply resting. Another measure is to use time management apps, since completely eliminating modern devices is far from possible. These apps send notifications to remind people of their tasks, helping them avoid wasting time and organize their days more effectively.

In conclusion, the main reasons behind people's failure to achieve work-life balance are the lack of effective enforcement of laws protecting workers' rights and the constant distractions posed by modern technology. However, through stronger government regulation and smarter use of digital tools like time management apps, individuals can regain control over their time, ultimately striking a better balance between professional and personal life.

28.09.2024**WRITING TASK 1**

You should spend around 20 minutes on this task.

The table below gives information about the amount of tax collected (as % of GDP) in five countries for 4 years between 1975 and 2005.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

	1975	1985	1995	2005
Sweden	46%	47%	51%	70.1%
USA	25.1%	25.4%	27.1%	27.4%
Korea	15.1%	16%	23%	32.1%
Turkey	16.4%	15%	24%	27.4%

The table shows the amount of tax revenue collected as a percentage of GDP in Sweden, the USA, Korea, and Turkey across from 1975 to 2005, divided at 10-year intervals.

Overall, all countries saw a rise in their tax-to-GDP ratios, albeit to varying degrees. Sweden consistently recorded the highest percentages and saw the most significant rise over the period.

In 1975, Sweden already had a notably high tax burden at 46%, and this figure rose steadily, reaching a peak of 70.1% by 2005. The USA, on the other hand, maintained relatively stable levels, hovering around 25% in the first decade and finishing at just over 27% in the last decades.

Korea saw the most dramatic increase, with its tax share rising from just 15.1% in 1975 to 32.1% in 2005, more than doubling over the period. Similarly, Turkey's figures increased from 16.4% to 27.4%, with the most notable jump occurring between 1985 and 1995.

WRITING TASK 2

You should spend about 40 minutes on this task.

Training 65-year-old people to use computers would be a good use of government money.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Government spending is often scrutinized by taxpayers, especially when funds are seen as being used inefficiently. One recent debate concerns whether public money should be used to teach computer literacy to senior citizens. While this may seem like a thoughtful initiative, I believe it is an unwise use of limited government resources.

Firstly, government budgets are already under pressure from numerous sectors, with essential public services such as healthcare and education often experiencing funding shortfalls. In recent years, for instance, even arts education—despite its cultural value—has suffered cuts on the grounds that it is not an immediate public necessity. Compared to this, teaching senior citizens computer literacy offers relatively limited public benefit. While it may improve the personal convenience of some individuals, it does not serve the broader population in a meaningful way. Given the many competing demands on public funds, computer literacy programs for the elderly should rank low on the list of government priorities.

Secondly, formal computer literacy courses may not even be the most effective way to help the elderly. Many of the basic tasks they need—such as checking email, browsing the internet, or making online purchases—can easily be taught informally by their children or grandchildren. Organizing structured classroom-based courses, especially those involving advanced skills like using spreadsheets or word processors, is largely unnecessary, as most seniors have little practical need for such tools. Moreover, those who are motivated to learn more can already access a wide range of free tutorials and support online or through community centers. As a result, investing public money into formal training programs would likely bring minimal returns.

In conclusion, while helping elderly individuals develop basic computer skills may have some personal benefits, it is not a justifiable priority for public funding. With more urgent services already underfunded and more efficient ways to deliver digital support available, allocating taxpayer money to this initiative would be a poor investment.

05.10.2024

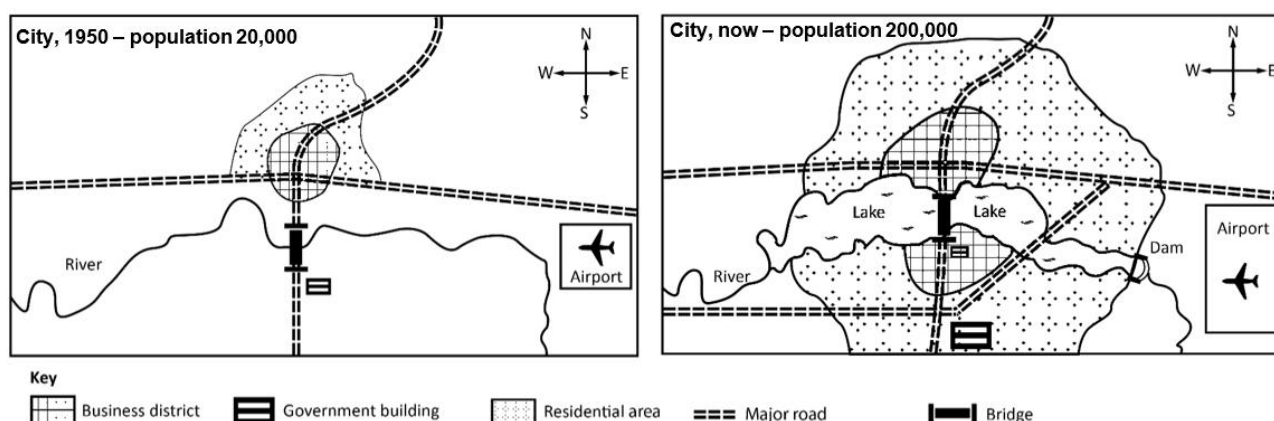

WRITING TASK 1

You should spend around 20 minutes on this task.

The plans below show a city centre before and how it looks now.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The maps compare the way a city centre looked in 1950 to its current appearance. Overall, the city has transformed considerably, with the addition of new transport facilities and the expansion of its business district. These changes allow the city to accommodate a much bigger population.

In 1950, the city was much smaller, with the population size of only 20,000 people. There were two major highways: one running from west to east and one stretching from north-east to south. The highways met in the center of the city, where the central business district was based. Part of the west-to-east road ran over a bridge across the river stretching the south of the city centre. Just the south of this river, next to the bridge, there was a government building. Finally, located in the southeast of the city was an airport.

The city has changed dramatically since then, with its population growing tenfold. The most major change has been a significant expansion of the business district, which now occupies a major part of the central urban area. The river has become a lake, with the dam constructed close to where the airport used to be, which also saw an expansion. The relocation of the government building, which got bigger in size, allowed for the construction of a major road that is now linked to the original highway running from west to east.

WRITING TASK 2

You should spend about 40 minutes on this task.

Many museums and historical sites are mainly visited by tourists but not local people.

Why is this the case and what can be done to attract more local people to visit these places?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Never before in history has tourism been as widespread as it is in the 21st century. Yet an interesting trend can be observed: museums and historical sites are often visited more by tourists than by local residents. This can be attributed to the locals' perceived familiarity with these places, as well as the fact that tourists often have a limited time and specific purpose when visiting. However, several strategies can be adopted to encourage more local people to engage with these cultural sites.

One reason why locals tend to avoid museums and historical sites is their perceived familiarity with these places. Since many residents grow up surrounded by these landmarks, they often take them for granted and feel little urgency to explore them. For example, people living in cities like Rome or Istanbul may pass by world-famous monuments daily without ever stepping inside, believing they can visit "someday," which rarely happens. In contrast, tourists usually visit with a clear purpose and a limited timeframe, which makes them more motivated to explore cultural attractions. Their trips are often carefully planned, and visiting such sites is high on their priority list. This contrast in mindset helps explain why museums and historical places often see more tourists than locals.

To increase local engagement with museums and historical sites, authorities can implement targeted outreach strategies that make these places more appealing and accessible to residents. First, offering discounted or free entry days specifically for locals can remove financial barriers and create a sense of inclusion. For instance, the Louvre in Paris introduced free Sunday entry for EU residents under 26, which significantly boosted local attendance. Second, museums can design community-focused events such as workshops, talks, or temporary exhibits that reflect local interests or celebrate regional heritage. When museums in Japan incorporated local artists and themes into their rotating exhibitions, they saw a notable rise in visits from nearby residents. These practical steps can help shift the perception of museums from static tourist attractions to dynamic spaces that locals can regularly enjoy.

In conclusion, locals often overlook museums and historical sites due to their familiarity with them and lack of urgency, unlike tourists who visit with a purpose and time limit. To address this, offering special entry privileges and organizing community-focused events can make these places more inviting for residents.

The graphs below show four categories of citrus fruits and the top three countries to which these were exported (in thousand tonnes) in 2010.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar charts give information about the amount of different types of citrus fruits (in metric tons) exported from different countries in 2010. Overall, out of the given fruit types, oranges predominated in exports, followed by lemons, grapefruits, and other types. While different countries were the leading exporters of different types of fruit, the largest suppliers in terms of total volumes were South Africa, the USA, and Mexico.

Oranges were by far the most exported fruit, with South Africa being the main exporter, at one million metric tons. Slightly less was sold by Egypt and the USA: 900,000 and 700,000 tons respectively.

Lemons and grapefruits were exported in significantly smaller quantities. Lemon exports came second at approximately half the figures for oranges. The two countries with the largest volumes were Turkey and Mexico, at 500,000 and 450,000 metric tons respectively. The third country, Argentina, exported half the volume Turkey did – 250,000 tons. Grapefruits were sold in even smaller amounts, with the USA and South Africa being the main suppliers at 225,000 metric tons each. Following some way behind came Turkey, with 175,000 tons.

When it comes to unspecified fruit types, a different pattern was observed. While Mexico was the absolute leader, showing 450,000 metric tons in sales (the exact same figure it did for lemons), the other two exporters in the top three – Israel and the USA – lagged far behind, with negligible amounts of just over zero.

WRITING TASK 2

You should spend about 40 minutes on this task.

Today news plays a crucial role in people's lives and now more significantly influences on people than before.

Why is this case?

It is a positive or negative development?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

In recent years, news has taken on an increasingly central role in the lives of many people. This can be attributed to two key factors: the fear-driven strategies of media outlets and a psychological phenomenon known as the fear of missing out (FOMO). Although staying informed has its advantages, I believe this development is largely negative due to its impact on mental health.

One reason for this growing influence is that many media organizations benefit financially from constant audience engagement. News outlets often highlight alarming topics such as wars, economic downturns, or rising prices - issues that evoke anxiety and compel people to keep checking for updates. This model increases page views, boosts subscriptions, and attracts advertisers. Another reason lies in human psychology: people naturally dislike uncertainty and tend to seek information that makes them feel more in control. Since social conversations frequently revolve around current events, staying updated has become a social necessity. For many, not following the news feels like being left out of something important.

There are, of course, some positive aspects to this trend. Being informed enables individuals to make thoughtful decisions, respond to emergencies, and participate more actively in society. However, the negative consequences often outweigh the benefits. The constant stream of news, much of it negative, can increase stress and anxiety. Media outlets often exaggerate the relevance of certain events to create a sense of urgency, even when the issues have little direct impact on the reader's life. This leads to a mental burden, where people feel overwhelmed or helpless despite being well-informed.

In conclusion, the growing influence of news in people's lives stems from both media strategies and natural human tendencies. While it may help people stay aware and prepared, the emotional toll it takes makes it a largely negative development overall.

The two bar charts show the proportion of 14-16-year-old students studying a modern foreign language in an English-Speaking country and the top three popular foreign languages

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The first bar chart shows the percentage of 14–16-year-olds learning a foreign language in an English-speaking country in 1984 and 2007, while the second chart presents the top three languages studied in those years. Overall, the proportion of both girls and boys studying a foreign language declined, with girls consistently outnumbering boys. French remained the most popular language, followed by German and Spanish.

In 1984, nearly half of the girls studied a foreign language, falling to 40% by 2007. For boys, the figure dropped from just under a third to around a quarter over the same period.

As for specific languages, French was by far the most commonly studied in 1984, with every second student learning it. Although still the most popular in 2007, its share had halved. The percentage learning German fell slightly from 20% to 15%, while Spanish saw a doubling, from 5% to 10%.

WRITING TASK 2

You should spend about 40 minutes on this task.

***These days there's no need to go to the live performance (e.g: show or concert) because what we can see on TV or computer screen is better.
To what extent do you agree or disagree?***

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

With the rise of streaming services, there is a view that live performances are unnecessary and that what is shown on TV or computer is superior. I completely disagree with this view.

Live performances give the feelings at-home viewing can ever replicate. Concerts, for example, are designed for months, with the involvement of such creative people as set designers, producers, directors and many others, with the sole purpose of making the event as memorable as possible. Those present in the venue can feel the energy of the crowd, participate in chants or applause, and even interact in subtle ways with the performers. This creates a shared emotional moment, something that a screen simply cannot capture. For instance, being in a packed stadium listening to a live band feels vastly different from watching a recording on a laptop, no matter how high the video quality is.

Another reason live performances remain valuable is that what people see on screen is often edited or filtered. Camera angles, sound mixing, and even post-production changes can affect how the performance feels. In contrast, live shows offer a raw, authentic experience including flaws and all, which many people value more. For example, stand-up comedy performances often rely on the live audience's reaction. Watching it at home removes that dynamic energy, making the jokes feel flatter or less engaging.

In conclusion, although streaming platforms have made performances more convenient and accessible, they fall short of capturing the emotional depth and authenticity of live events. For this reason, I firmly disagree with the idea that what we see on screen is superior to experiencing a performance in person.

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph below shows the amount of energy generated by wind in four countries in the period 1980-2000.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart illustrates changes in the amount of electricity generated by wind power (in megawatts) in India, Denmark, Germany, and the US between 1985 and 2000.

Overall, electricity production increased in all four countries, with Denmark showing the most dramatic rise and overtaking the US as the leading producer by 2000.

The US and Denmark were the largest producers for most of the period. In 1985, the US generated 1,200 megawatts—six times more than Denmark. Five years later, the US figure peaked at just over 1,600 megawatts, while Denmark's rose slightly to 200 megawatts. However, over the remainder of the period, US production declined slightly to 1,500 megawatts, whereas Denmark experienced a sharp increase, finishing at just over 1,600 and surpassing the US by 2000.

India and Germany saw relatively modest but steady growth. India started at 200 megawatts and rose to 1,200 by 2000, while Germany went from 400 to 900 megawatts, though at a slower pace.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people suggest that a country should try to produce all the food for its population and import as little food as possible.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

With globalisation falling out of favor, there is an emerging view held by a small fringe that countries should depend very little on food exports and cultivate all their food themselves. I completely disagree with this view.

Firstly, it is simply impossible to achieve this goal. Not all countries have favorable conditions for food crops to be grown. Countries such as Japan or Nauru, a country in the middle of the ocean, cannot meet all their food demands even if they wanted to because the soil there is infertile and arid, or semi-arid, conditions that are not conducive to growing food crops. Even if these countries, relying on the latest farming techniques, decide to grow food crops, it would cost a lot, which would defeat the purpose of being fully sovereign.

The second reason relates to how such an ambition poses a threat to the global economy. As of now, the world economy is in good harmony because countries are open to exports and imports. The exchange of commodities, including food, ensures that poorer countries can sustain themselves with farming jobs created in their agricultural economies, while richer countries pay for the food they are getting from these countries. While there might be concerns regarding inequality created by this, it has improved a lot in recent years with the growth of farming practices like Fair Trade.

In conclusion, I am completely against the idea that countries should try to achieve full food sovereignty. One reason relates to feasibility. Another reason is that this might affect the global economy negatively.

WRITING TASK 1

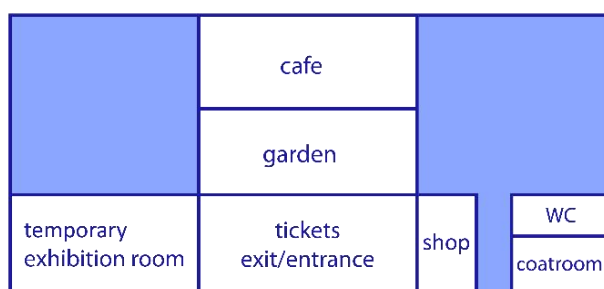

You should spend around 20 minutes on this task.

The maps show the changes in the functional area of a museum in 1988 and after the decoration in 2008.

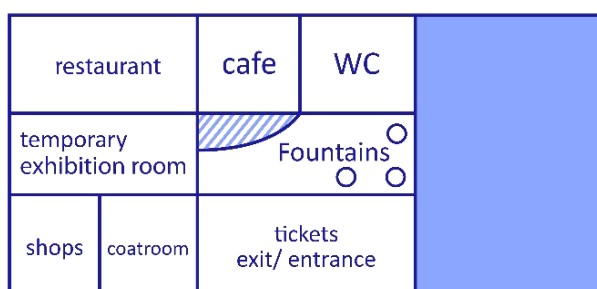

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Museum Floor Plan 1998

Museum Floor Plan 2008

 permanent exhibition room
 outdoor area for cafe

The maps illustrate the layout of a museum prior to and following some changes between 1998 and 2008. Overall, the museums underwent significant modifications, with a noticeable shift towards commercialization and enhanced visitor experience through the addition of new facilities.

In 1998, the central area featured a garden surrounded by a café to the north, permanent exhibitions to the east and west, and an exit and entrance area along with a ticket office located to the south. While the southern section of the west wing included a temporary exhibition, that of the east wing contained a shop, a WC, and a coatroom.

By 2008, substantial developments had taken place. The garden in the center was replaced by an outdoor seating area for the café and a series of fountains further east. With the WC relocated next to the café, the coatroom, shop, and additional new shops moved to the southwest, where once the temporary exhibition was located, the western side of the museum was entirely dedicated to the permanent exhibition. The permanent exhibition on the other side was removed to make way for a new restaurant in the northern section, with the temporary exhibition relocated just to its south. Lastly, the entrance and exit, along with the ticket office, remained unchanged in their original location.

WRITING TASK 2

You should spend about 40 minutes on this task.

Young people who commit crimes should be treated the same way as adults.

To what extent do agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

It is often believed that the approach towards dealing with adult criminals should be adopted to punish juvenile delinquents. I completely agree with this notion for several reasons.

Firstly, punishment should be applied based on the severity of the crime rather than the age of the offender. Young people should be held responsible for their own actions as they are already aware of who they are as individuals can equal adults both mentally and physically. For example, young professional athletes are often seen performing as well as, if not better than, their adult teammates or contenders despite the age difference. This goes to show that as long as they are physically capable of committing crimes, they should be mentally capable to face the consequences.

Another reason is recidivism. By nature, people, regardless of their age, tend not to learn from their mistakes unless those mistakes cost them something valuable, such as time or money. So, when young offenders get away with their crimes without being punished as severely as their older counterparts, they may wrongly assume reoffending may be dealt the same way. Also, some teenagers may have this aggressive behaviour in their genes, making it nearly impossible to rehabilitate them through simple therapy sessions. Thus, it is very important to make sure that such young criminals are held accountable for their crimes and punished accordingly.

In conclusion, when punishing criminals, the nature of their crimes and the possibility of recidivism should be taken into account instead of their age. Therefore, I completely agree that juvenile delinquents should be treated the same way as adults.

WRITING TASK 1

You should spend around 20 minutes on this task.

The charts below show the percentage of male and female workers in country A and country B.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The pie charts compare the proportion of male and female employees across various sectors in two countries. Overall, although service sectors in both countries have the largest share of the workforce, the figure for country B is noticeably higher. In addition, industry in country A employs the smallest percentage of men and women, whereas in country B, this is true for agriculture.

Focusing on male workers first, 56% of men in country A work in the service sector, compared to 65% in country B. Similarly, while industry in the former country accounts for only 15% of male employees, it represents nearly a third of male workers in the latter one. In contrast, country A has a significantly larger proportion of men working in agriculture than country B, at 29% and 3% respectively.

As for female employees, nearly half of women in country A are employed in the service sector, while the figure for Country B is much larger, at a staggering 88%. Industry employs a comparable share of women in Country A and Country B, with respective figures of 8% and 11%. However, 43% of women in Country A are employed in agriculture, as opposed to 1% in Country B, indicating a stark difference.

204 words

Written by Navruzбек Khamidov (IELTS 8.0, W7.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Caring for children is probably the most important job in any society. Because of this, all mothers and fathers should be required to take a course that prepares them to be good parents.

To what extent do you agree or disagree with this view?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Raising children is widely considered one of the most important responsibilities in any society. While I agree that parenting courses can be very helpful, I do not believe that all parents should be required to take them by law.

One strong argument in favour of parenting courses is that many people become parents without having any previous experience or guidance. A course can teach them how to care for their child's physical, emotional, and mental development, especially in the early years. For example, first-time parents often struggle with feeding routines, discipline, or understanding childhood behaviour, and a well-designed course can give them practical tools. In addition, such training could help reduce the number of cases where children suffer from neglect or poor parenting. If more parents were aware of how to support their child's needs, society as a whole could benefit from healthier and more balanced future generations.

However, making these courses compulsory might not be realistic or even effective for every family. Not all parents learn best in a classroom setting, and many gain valuable skills through hands-on experience or support from extended family members. Forcing every mother and father to take a course could also be seen as an unnecessary government intrusion into private family life. Furthermore, some parents might simply treat it as a box-ticking exercise and not take it seriously. Instead of a one-size-fits-all approach, it may be more useful to offer free parenting courses as an option, especially to those who feel unprepared or are facing particular challenges.

In conclusion, while parenting courses can offer useful guidance and improve child development, they should not be mandatory for everyone. Encouraging and making them available is a better approach than requiring all parents to take them, as every family's situation is different.

16.11.2024

WRITING TASK 1

You should spend around 20 minutes on this task.

The table below shows the percentage of working men and women in different areas of employment in one country in 1986, 1996 and 2006.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Area of employment	Men (%)			Women (%)		
	1990	2000	2010	1990	2000	2010
Retails / Shops	13	13	13	7	8	9
Health	7	7	9	9	11	15
Manufacturing industry	30	15	10	7	8	3
Tourism	13	10	10	23	25	27

The table compares the proportion of men and women working in different sectors in one country in the years 1990, 2000, and 2010. In general, while the percentage of female workers showed an overall upward trend, the opposite was true for their male counterparts. Notably, jobs in manufacturing and retail sectors were more popular among men, whereas women tended to favor health and tourism industries.

Focusing on male-dominated areas first, 30% of men were working in manufacturing in 1990, which then halved in the second decade, before hitting a trough at 10% in 2010. The figure for women was smaller but followed a similar downward trend, dropping from 7% in 1990 to 3% in 2010. Male workers in the retail sector accounted for 13%, a figure which then remained unchanged in each decade. In contrast, women showed a steady increase, starting at 7% and going up to 9% 2010.

As for the areas where figures for females were higher, in tourism, women made up 23% of workers in 1990, a figure which then increased gradually, peaking at 27% in the final decade. Males in this industry represented only 13% of the workforce in 1990, which then fell by 3 percentage points in the following decades. The health sector showed an uninterrupted increase in the percentage of female employees, rising from 9% in 1990 to 15% in 2010. The figure for male workers remained at 7% in the first two decades, before rising to 9% in the last decade.

248 words

Written by Navruzбек Khamidov (IELTS 8.0, W7.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Older generations often hold some traditional ideas on the correct way of life, thought and behaviour. Most people argue that these are not helpful for younger generations to prepare for modern life.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

It is often claimed that traditional values passed down by older generations are outdated and unhelpful in today's fast-changing world. However, I completely disagree with this view, as many of these ideas still provide a strong foundation for young people to lead meaningful and successful lives.

Firstly, traditional values such as respect, hard work, and responsibility are just as relevant today as they were in the past. While modern technology has changed how we live and work, the importance of being honest, reliable, and respectful toward others remains the same. These values help young people build strong relationships both in their personal lives and in the workplace. For example, a young professional who shows respect to their colleagues and works hard is more likely to earn trust and succeed in their career. Secondly, older generations often teach the importance of family bonds and community support, which are essential for mental well-being. In a time when many young people feel isolated or stressed, these traditional ideas can create a strong sense of belonging and stability.

Moreover, older generations offer life experience that young people simply do not have yet. They have lived through challenges, made mistakes, and learned valuable lessons that can help the next generation avoid common pitfalls. Listening to their advice on saving money, managing time, or dealing with failure can give young people a clearer direction in life. In addition, many traditional customs promote self-discipline and patience, which are key qualities for long-term success. Although modern life moves quickly, not every solution is instant, and learning to stay calm and consistent is something older people often understand very well.

In conclusion, I strongly believe that the traditional views and values held by older generations still play a useful and meaningful role in guiding young people. These ideas help build character, teach life skills, and provide emotional support in today's complex world.

23.11.2024

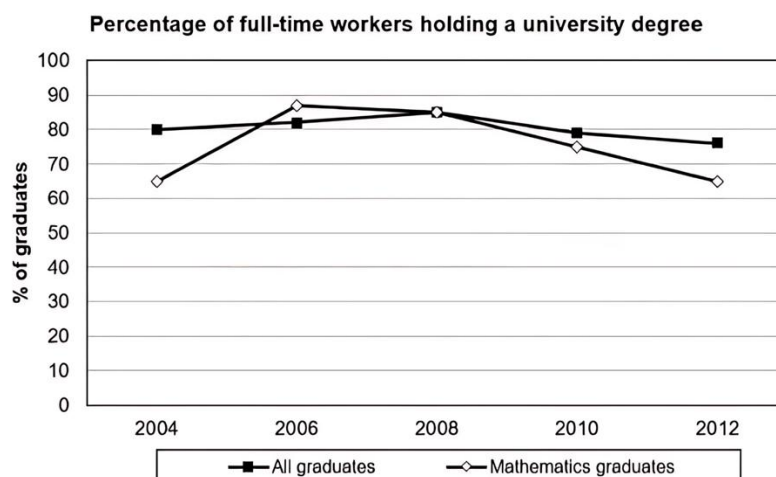

WRITING TASK 1

You should spend around 20 minutes on this task.

The graph and table below give information about the percentage of graduates in Australia who worked full-time after university from 2004 to 2012.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Average salary of graduates

	2004	2006	2008	2010	2012
Maths graduates	\$41,000	\$43,500	\$51,500	\$48,500	\$59,000
Other Graduates	\$41,000	\$43,500	\$48,000	\$52,000	\$53,000

The line graph compares the percentage of math graduates and graduates from other majors who were in employment between 2004 and 2012, while the table shows how much salary they earned during the same period. Overall, the proportion of graduates in full-time employment declined over the period, with the figure for math graduates remaining lower throughout. In addition, despite initial similarities in earnings, people with a math degree tended to earn more overall.

Looking at the line graph first, the percentage of those graduating from university stood at 80% in 2004, after which it went up slightly to around 85% in 2008, before ending the period at about 75%. The proportion of math degree holders was smaller at the beginning of the period, at 65%, a figure which then rose sharply to peak at nearly 90% after overtaking that of other graduates in 2006. After reaching its peak, the figure experienced a gradual fall, ending the period at its starting level.

In terms of earnings, the starting salary in 2004 and the subsequent increase in 2006 were the same for all graduates, at \$41,000 and \$43,500 respectively. However, in the following years, the rate of salary for math graduates showed a sharp increase, reaching \$59,000 in the final year, while that of other graduates increased marginally, finishing the period at \$53,000.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people say that large companies should provide sports and social facilities for local communities.

To what extent do you agree or disagree with this view?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

It is often suggested that large companies should support the communities in which they operate by offering sports and social facilities. I strongly agree with this idea, as such involvement can bring long-term benefits to both society and the businesses themselves.

One clear reason is that large corporations have far more financial resources than many local governments. With their massive profits, they are in a strong position to build or maintain sports centres, playgrounds, or youth clubs, especially in poorer areas where public funding is limited. For example, tech companies or multinational brands could easily support the construction of a local football pitch or community gym without affecting their core business operations. Another reason is that providing such facilities can improve the well-being of local residents. Access to sports and social spaces encourages people to stay active, connect with others, and lead healthier lifestyles. Over time, this can reduce public health problems and help build a more connected, positive community.

In addition, companies that contribute to their communities tend to enjoy stronger reputations and more loyal customers. When a business is seen as socially responsible, people are more likely to trust it, support its products, and even choose to work for it. For instance, firms that sponsor local events or youth sports teams often become well-liked and respected in the area. Furthermore, involving local people in social activities organized or funded by companies can reduce crime and anti-social behaviour. When young people have access to after-school clubs or weekend events, they are less likely to get involved in trouble, which benefits both the community and the companies operating there.

In conclusion, large companies should support the development of sports and social facilities because they have the resources to do so and because it helps improve people's health and social life. At the same time, it builds trust and reduces social problems, creating a safer and more loyal environment for the business to grow in.

WRITING TASK 1

You should spend around 20 minutes on this task.

The chart below shows the results of three surveys on absenteeism in a particular European country in the years 2000, 2005 and 2010. The results show the reasons people gave for not going to work.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart compares the results of three surveys as to why employees in one European country were absent from work in 2000, 2005 and 2010. Overall, while the percentage of people taking time off work because of illness and family responsibilities went down noticeably, the opposite trend was observed for the remaining reasons. Notably, although the proportion of people who took sick leave went down, it remained the most common reason for absence in each given year.

Looking at the main causes of absenteeism, falling sick was a major reason for 45% of people to be off work in 2000, which then fell to 40% in 2005, and finished at 35% in the final year. The second main reason for absence from work was family responsibilities, with nearly 30% of workers taking time off in 2000. The figure then experienced a marked fall to about 26% and remained at this level until the final year.

As for minor reasons, the proportion of people who were on leave to take care of personal needs stood at 15% in the first year, with a subsequent rise to around 23% in 2005, and a final decrease to 20%. Unexpected issues caused 10% of people to be absent from their workplaces, a figure that then soared to 17% in 2005 and did not change thereafter. Stress was the least common reason, with only about 6% of employees taking leave in 2000. Following a slight dip in 2005, the proportion doubled in the final year.

251 words

Written by Navruzбек Khamidov (IELTS 8.0, W7.5)

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think that newspapers are the best way to learn about news. However, others believe that they can learn news more effectively through other media.

Discuss both views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Opinions vary as to what source of news is best. While some believe that keeping up to date through newspapers is the most effective, I would argue that in today's technologically driven world we have far better options to learn about news.

On the one hand, it is understandable why newspapers are still regarded useful. First and foremost, people who are not tech savvy, such as elderly or those living in less technologically developed regions, often find it less challenging to stay up to date with the latest news by reading newspapers. Secondly, the quality of news coverage is often better in many established newspapers. Such media organizations as Guardians and The economist usually have enough budget to hire professional and experienced journalists who can carry out detailed research before writing an article.

However, I think the invention of TV and radio and most importantly the internet has made it much easier for most people to access news. Many people around the world have at least one TV set in their households, and a radio in their cars. Along with the benefits of watching or listening to news from fluent journalists, people can go about with their daily routines while keeping up to date. The internet is another great way of learning about news. Today, many newspapers provide their services online for a small subscription fee, making it even easier for people to read news on their portable devices no matter where they are.

To conclude, the importance of newspapers today can be attributed to the preferences of certain groups of people and the quality of news coverage. In my opinion, however, other media platforms, particularly the internet, can be far more effective way of staying up to date for most people around the world.

WRITING TASK 1

You should spend around 20 minutes on this task.

The world health organization recommends that people should eat five or more portions of fruits and vegetables per day. The chart below shows the percentage of males and females in the UK by age group in 2006

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The World Health Organization advises that people consume more than five servings of produce daily. The bar chart compares the proportions of people in the UK who did so in 2006, broken down by age and gender.

Overall, the share of women following dietary advice was higher than that of men in all age groups except for the oldest one. The difference, however, was only a few percentage points. The following trend can also be seen: the older people became, the higher the percentage of them eating the suggested amount, with consumption peaking in the 55-64 age group before declining in the two oldest age ranges.

Of all the age groups polled, people in the youngest one followed guidelines the least, with 15% of men consuming the suggested amount as opposed to 17% of women. These consumption levels increased with age, by 5% for men and 6% for women in the subsequent age range and again by 3% and 2% in the one after that, respectively. Among the 45-54-year-olds, the figure for men held steady at just under a quarter while that for their female peers continued to climb, accounting for just over a quarter.

The most pronounced rise was recorded in the 55-64 age category, in which exactly a third of men and a slightly higher share of women (at just under 35%) ate the recommended quantity of fruit and vegetables. These figures were the peak level of consumption for both genders.

The two oldest age brackets, however, bucked the foregoing trend as adherence to dietary guidelines declined in these groups. As was the case in the preceding age groups, women outnumbered men in the 65-74 age group too, with respective figures amounting to around 29% and 27%. The numbers reached parity in the oldest age group, at exactly 25%.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some experts believe that when a country is already rich, any additional increase in economic wealth does not make its citizens any more satisfied.

To what extent do you agree or disagree

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

There is a view that in wealthy nations where basic needs are already met, further economic growth does not necessarily lead to higher levels of happiness. I fully agree with this view for two reasons.

Firstly, once a country reaches a certain level of affluence where citizens have access to quality healthcare, education, and infrastructure, additional income contributes very little to overall happiness. Research in behavioral economics supports this idea through the concept of “diminishing marginal utility,” which suggests that each additional unit of income brings less and less emotional benefit. For example, earning an extra \$10,000 may be life-changing for someone in poverty, but for a millionaire, it barely registers. Countries like Japan and South Korea, despite having high GDP per capita, often report relatively low levels of life satisfaction, indicating that financial prosperity alone does not guarantee contentment.

Secondly, true happiness often stems from non-economic factors such as strong social connections, a sense of purpose, and work-life balance—none of which are directly tied to a nation’s economic expansion. In fact, constant pursuit of economic growth may even harm these aspects by increasing stress levels, widening inequality, or promoting consumerist lifestyles that erode mental well-being. The Scandinavian countries, for instance, prioritize social welfare and community engagement over rapid economic growth, and consistently rank among the happiest nations in the world.

In conclusion, I firmly believe that beyond a certain point, further increases in national wealth do not enhance citizens’ satisfaction. Instead, societies should focus on improving quality of life through social cohesion, mental health support, and environmental well-being rather than chasing endless economic growth.

07.12.2024

WRITING TASK 1

You should spend around 20 minutes on this task.

The table shows the number of international visitors' arrivals came to nine different countries and the percentage changes between 2009 and 2010.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Country	In 2009 (millions)	In 2010 (millions)	Change
France	76	76	+0
US	66	67	+1.5%
Spain	55	56	+1.8%
UK	55	57	+3.6%
Italy	44	45	+2.3%
Turkey	33	45	+33%
China	22	34	+55%
Germany	11	23	+109%
Hong Kong	10	9	-11%

The table compares the number of tourists who came to nine popular tourist hotspots around the world along with the percentage changes between 2009 and 2010.

Overall, tourist numbers exhibited an upward trend in seven countries, with Germany experiencing the biggest percentage change. France and Hong Kong, in contrast, saw stagnation and a decline, respectively. Notably, despite the period of no change, France was still the most popular choice for bucket-listers.

Countries which received the biggest numbers of tourists were also the ones with the least percentage change over the period. France was on top of the list with a whopping 76 million tourist arrivals, a figure that remained unchanged over the span. The USA and Spain were the second and third most popular tourist destinations in 2009, with 66 and 55 million visitors. Only 1 million more visitors holidayed in these nations one year later, reporting 1.5–1.8% changes. The number of tourists to the UK and Italy also rose, albeit more significantly than their counterparts, from 55 and 44 million in 2009 to 57 and 45 million in 2010, respectively. The UK reported a 3.6% percentage change while Italy showed a 2.3% change.

The remaining countries witnessed more dramatic changes during the one-year span. About 33 million people travelled to Turkey in 2009, but this number experienced a marked rise to 45 million in 2010 (33% change). Meanwhile, the figure for China grew substantially from 22 million to 34 million, showing a 55% change. Yet the most noticeable change was experienced by Germany, where tourist numbers ballooned from just 11 million to 23 million in just one year—a record-high increase of 109%. Finally, Hong Kong was the only country in the list that witnessed a drop in tourist numbers, from 10 million to 9 million (-10%).

WRITING TASK 2

You should spend about 40 minutes on this task.

Housing is a basic necessity for everyone. Therefore, government should provide free housing for people who cannot afford to pay it.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Accommodation is regarded as a fundamental need for every person. It is thus believed that the government ought to provide free housing for those who are unable to pay it. As noble as this idea might seem, it is, in my opinion, not a feasible approach for many reasons.

Proponents of free housing for everyone highlight some benefits. Firstly, free housing can significantly reduce homelessness and extreme poverty. Today, millions of people around the world live below the poverty line. Providing accommodation for vulnerable groups such as the disabled, the elderly, and low-income families is more than likely to improve living standards and the average life expectancy. In addition, housing can also boost economic productivity in the country by enabling people to focus on work and studies. Improved public health and safety are an added benefit of free housing since people who have houses are less likely to commit a crime.

Despite these advantages, I believe free housing is not a viable approach for two reasons. The first one is that free housing can become a huge financial burden on taxpayers and national budgets. The money received from taxes is used to improve various aspects of our lives such as education, national security, transport infrastructure, and public health, among many others. Building new houses usually requires huge amounts of money, often more than any other expense the government allocates. If the government were to finance all the housing for people, there would be a lack of money to improve other sectors, resulting in an imbalance in spending and a deterioration in living standards. Additionally, since those who pay taxes tend to already have their own accommodation, public backlash against this approach is bound to happen.

Secondly, the provision of free houses may encourage dependency and reduce motivation to work. Although public welfare systems are designed to help people in need, they also increase dependency. People who rely on these systems may feel less inclined to find a job and work simply because they are supported by the government. This way of thinking can be detrimental to the economy, which heavily relies on the human workforce. As a result, the economy takes a big hit, and the productivity and prosperity of a nation are highly likely to decline.

In conclusion, the idea of free housing is a noble goal, for it allows people to avoid poverty and its consequences. However, I believe it is not an achievable goal, as there are undesirable outcomes, such as a burden on taxpayers and reduced motivation to work.

WRITING TASK 1

You should spend around 20 minutes on this task.

The chart below shows the number of people employed in five types of work on one region of Australia in 2001 and 2008.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

The bar chart provides information about the employment rates in five different sectors in one part of Australia in 2001 and 2008. Overall, while the number of people working in sales, computing and nursing showed an upward trend, the reverse was true for accounting and farming. Additionally, sales employed by far the highest number of people whereas farming employed the least.

Sales hired more and more new recruits between 2001 and 2008, as did computing and nursing sectors. With about 155,000 employees, sales was the biggest sector of employment in the first year and was one that saw an uptick to around 165,000 seven years later. 60,000 people worked in computing and other related fields initially, followed by a pronounced rise to 80,000 over the seven-year period. But the same cannot be said of nursing, which saw a marginal increase in its employment numbers to just over 60,000 from an initial figure of 60,000.

Workers in accounting and farming, on the other hand, faced redundancy. Upwards of 65,000 people had a job in accounting in 2001, the second-highest figure for that year, but by 2008, this number had dwindled to just 60,000. Yet the most marked drop was seen in farming, where the number of employees fell from around 30,000 to just under 20,000 during the period in question.

WRITING TASK 2

You should spend about 40 minutes on this task.

***Despite better education , some adults are unable to write and read.
What are the disadvantages people are having?
What should the governments do to avoid this?***

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Education is, and has always been, the backbone of every thriving society. However, despite the improvements in education, some members of society are incapable of reading and writing. This leads to several problems for these individuals but there are also measures the government can implement to mitigate these negative effects

One obvious issue has to do with economic stability. People who lack basic literacy skills might suffer from various financial problems. In today's capitalistic world, most of the high-paying jobs require people to have a qualification, which can only be acquired through education. And since illiterate people cannot read and write, they are unable to take conventional entrance exams to universities. Even if they get accepted to universities, without the ability to read and write, they are highly unlikely to graduate. As a result, these people have no choice but to work in blue-collar jobs, which are usually associated with below average salaries and poverty.

Daily life can also pose challenges when people are illiterate. All aspects of our lives are related to literacy in one way or another. Whether people want to read the latest news, check price tags and product details in a supermarket, or simply stay in touch with their loved ones on social media, they need to know how to read and write. Tasks that might seem straightforward for literate people can seem daunting and frustrating for those who are illiterate. To make matters worse, such individuals are often vulnerable to scammers. Fraudsters can easily deceive them into signing illegal documents that they may not understand due to their lack of literacy.

That said, the government can take some steps to stem the problem. The first solution would be adult learning programs. The education system can organize learning programs specifically tailored to the needs of adults. These programs could be designed in a way that allows adults to learn at their own pace, which can be done through online lessons. The flexibility of online lessons also means that adults who have time constraints due to job and family commitments are able to join classes at a suitable time. Apart from that, new technologies, especially AI, can aid learning. AI can adapt lessons to each learner's level and pace, while also analyzing performance and providing instant feedback. AI-backed lessons could be more engaging and interactive, leading to more effective lessons.

In conclusion, although a lack of literacy can result in economic hardship and complicate daily life, solutions such as adult learning programs and the use of AI can help address and prevent this issue.

WRITING TASK 1

You should spend around 20 minutes on this task.

Chart and table provide allocation of men and women for the household activities, apart from paid work, in 2008 in the UK.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

Leisure activities (Average minutes per day)	Men	Women
TV, video, radio	137	118
Reading	18	19
Sport	15	11

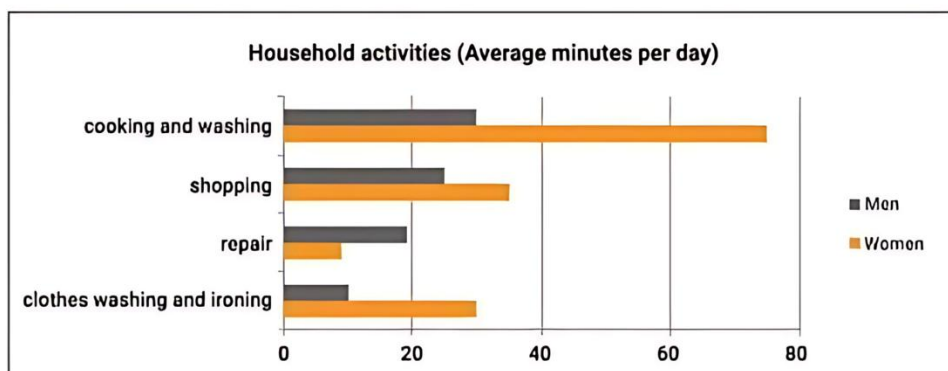

Table and bar chart show how much time men and women spend on free-time activities and household chores per day in the UK, in 2008.

Overall, both males and females allocated the most time to TV, video, and radio during their off hours, while spending significantly less time on reading and sports. When it comes to household duties, females exhibited much higher involvement in all activities than their male counterparts, except for repairs, which were primarily a male responsibility.

TV, video, and radio were by far the most popular pastimes among both men and women, with the former group dedicating more time (137 minutes) to this pursuit than the latter (118 minutes). Both genders spent approximately 18–19 minutes per day reading, which was slightly more than the time allocated to sports—15 minutes for males and 11 minutes for females.

As for house chores, cooking and washing up were the most time-consuming activities, taking up 30 minutes of men's time and nearly 80 minutes of women's time. Women devoted over half an hour to shopping, compared to men who spent just over 20 minutes on the same activity. Females once again allocated more time to laundry and ironing, spending 30 minutes—twice as much as males, who spent just 15 minutes. Repairs were primarily handled by males, who spent nearly 20 minutes on them, compared to females who devoted only 10 minutes.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people say that it is possible for a country to be both economically successful and have a clean environment. Others disagree.

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Some people believe that a nation can achieve economic growth while maintaining a clean environment, while others argue that these two goals are incompatible. However difficult it may seem, I believe these goals are not mutually exclusive.

Skeptics of the idea that a strong economy and a clean environment can coexist might offer two main arguments. The first argument is the trade-off between economic growth and environmental damage. When a country focuses on improving its industry, they will have to rely on fossil fuels in manufacturing and transportation. These practices can, in turn, increase the carbon footprint, contributing to air pollution. A quintessential example is China, where economic improvement, despite lifting millions out of poverty, has led to severe air and water pollution. Deforestation is another consequence of economic growth. Economic stability is often followed by urbanisation, which requires clearing forests. The result is a loss of biodiversity and the destruction of animal habitats.

Nonetheless, I believe that economic growth can go hand in hand with a clean environment. Economic prosperity can give people the opportunity to focus on environmental issues, rather than worrying about basic needs, as is often the case in impoverished countries. Sweden is a good case in point. The Scandinavian nation boasts strong economy with high GDP per capita but is also leading in renewable energy, with about 50% of its energy coming from renewables. What's more, the country is one of the most cycle-friendly places on Earth and has enacted strict environmental laws. Germany is another great example. Despite being one of the largest economies in the world, it heavily invests in clean energy through the Energiewende policy. The policy translates as "energy transition", meaning transitioning from a high-carbon energy system to a low-carbon, nuclear-free energy system. German people also prioritize green spaces and reducing plastic use. As a result, the country has abundant lush forests and an efficient plastic recycling system.

In conclusion, although some argue that economic stability and environmental sustainability are incompatible, I believe it is possible to achieve both for the reasons outlined above.

28.12.2024**WRITING TASK 1**

You should spend around 20 minutes on this task.

The table below shows the employment of students from four countries in the UK after their first courses in 2001.

Summarise the information by selecting and reporting the main features, and make comparison where relevant.

Write at least 150 words.

First degree graduates from different UK universities in employment in 2001

Countries	Permanent employment	Temporary Employment	Overseas Employment	Total employment
Scotland	43.6%	20.2%	2.6%	66.4%
England	33%	23%	2.3%	58.3%
Wales	30%	12.4%	2.9%	45.3%
Northern Ireland	20%	8.6%	5%	33.6%

The table illustrates the occupation status of university graduates in four countries in the UK in 2001.

Overall, university graduates in Scotland exhibited the highest employment rate, followed by those in England and Wales, while graduates in Northern Ireland lagged far behind in this respect. Regarding employment status, permanent employment was predominant across all countries, while overseas employment recorded the lowest rate.

As for long-term employment, Scotland took the lead, with a whopping 43.6% of graduates in this country securing permanent positions, while those in England and Wales recorded rates of 33% to 30%. Only about 20% of bachelor's degree holders were employed permanently, the lowest percentage in this category. Temporary employment accounted for much lower percentages. Specifically, 23% of university alumni in England and 20.2% in Scotland opted for short-term employment, while Wales and Northern Ireland had a combined total of 20%.

Working abroad was the least common choice among university graduates. Five percent of those from Northern Ireland moved to foreign countries for work, which was twice the rate of graduates from the other countries, where the figures ranged between 2.3% and 2.9%.

Scotland and England showed much higher employment rates, with respective figures of an impressive 66.4% and 58.3%. The rate in Wales was slightly lower at 45.3%, while Northern Ireland lagged significantly behind at 33.6%.

WRITING TASK 2

You should spend about 40 minutes on this task.

Some people think that we should invent a new language for international communication.

Will the benefits of this outweigh the problems associated with it?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

It is believed by some that a new language should be created for global communication. However, I would argue that the issues associated with this would outweigh any potential benefits.

A new global language can offer two main advantages, the first of which is easier global communication. One single international language would allow all people to communicate with one another without difficulty. This could result in improved international relations and a boost in global trade and business. The number of conflicts could also decrease significantly, thanks to improved mutual understanding between countries. Another advantage has to do with education. Knowledge and information that once required translation for broader accessibility would become instantly available to everyone. Regardless of where people live, they could access the latest developments without language barriers.

However, the challenges posed by a single global language, in my view, are more serious. The first and most significant consequence is the loss of cultural and linguistic diversity. The adoption of a single global language could lead to the disappearance of many minority languages. Historically, when one language becomes dominant among the majority, other languages often fall into disuse and eventually become extinct. For example, the decline of indigenous languages in Australia and North America illustrates how dominant languages like English have contributed to the erosion of native tongues and cultural heritage.

Cultural homogenization is another issue. One global language might lead to a more uniform culture, reducing uniqueness. Today's globalization demonstrates how this process can contribute to the loss of many cultural traditions and local customs, as people increasingly adopt similar lifestyles, values, and practices. For example, the global spread of Western fast-food chains and fashion trends has overshadowed many traditional cuisines and clothing styles, leading to a more homogenized cultural landscape. This diminishes the rich diversity that different cultures bring to the world, potentially resulting in a less vibrant and less varied global society.

In conclusion, I believe the drawbacks of having a single international language greatly surpass its advantages. Not only does it lead to the loss of cultural and linguistic diversity, but it also transforms the world into a global village where everything becomes increasingly similar.
